IN HOUSE REPORT, NMRI	BUREAU OF MEDICINE AND SURGERY(NAVY) WASHINGTON, D. C.

This report contains about 965 references dealing with the role of the vestibular apparatus in compressed air work. The sources for this bibliography include the diving medicine reference works as well as the literature dealing with vestibular functions. In addition, there are many items in the bibliography which would not typically be seen when consulting the standard reference works in diving medicine or vestibular physiology. These include obscure references and/or translations of articles not previously translated. The references are sorted by subject matter into six categories:

Category I. Vestibular Symptomatology as a Sign of Decompression Sickness
(Compression Effects; Isobaric?)

Category II. Clinical Investigation of Vestibular Symptomatology

Category III. Tests of Positive Function of Vestibular Apparatus

Category IV. Perceptual Illusions Occasioned by the Environment Some of Which
May be of Vestibular Origin

Category V. The Use of the Vestibular System as an Inertial Guidance System

Category VI. Auditory Studies which Have Relevance for Understanding
Vestibular Function Underwater.

The major category is Category I (293 references). Most of the citations are annotated and many are cross-referenced between and within categories. It is felt that the role of the vestibular system in compressed air work is presently under-estimated. This bibliography calls attention to the incident of vestibular involvement in compressed air work and provides reference to the background material essential for understanding and future study of vestibular problems.

ABSTRACT

This report contains about 965 references dealing with the role of the vestibular apparatus in compressed air work. The sources for this bibliography include the diving medicine reference works as well as the literature dealing with vestibular functions. In addition, there are many items in the bibliography which would not typically be seen when consulting the standard reference works in diving medicine or vestibular physiology. These include obscure references and/or translations of articles not previously translated. The references are sorted by subject matter into six categories:

- Category I. Vestibular Symptomatology as a Sign of Decompression Sickness (Compression Effects: Isobaric?)
- Category II. Clinical Investigation of Vestibular Symptomatology
- Category III. Tests of Positive Function of Vestibular Apparatus
- Category IV. Perceptual Illusions Occasioned by the Environment Some of Which May be of Vestibular Origin
- Category V. The Use of the Vestibular System as an Inertial Guidance System
- Category VI. Auditory Studies Which Have Relevance for Understanding Vestibular Function Underwater

The major category is Category I (293 references). Most of the citations are annotated and many are cross-referenced between and within categories. It is felt that the role of the vestibular system in compressed air work is presently underestimated. This bibliography calls attention to the incidence of vestibular involvement in compressed air work and provides reference to the background material essential for understanding and future study of vestibular problems.

ACKNOWLEDGMENTS

By its nature, a bibliography depends heavily on the technical assistances available to produce it. The author is indebted to the following: to Nancy Loudin, who typed the manuscript; to Jackie Holiman and Wendy Cummings, who typed drafts and performed other chores; and to Ernie Gendelman, Wendy Cummings, and Eleanor Capps, who provided general library help.

A special debt of gratitude is owed to Peggy Matzen, who performed the Herculean task of editing, categorizing, ordering and indexing the text as well as ram-rodding the reproduction.

In addition, the author wishes to dedicate this bibliography to Mrs. T. Robinson, who as Head Librarian at the Naval Medical Research Institute, contributed to this bibliography in many important tangible ways and also by the way she conveyed her commitment to scholarship with others.

PROLOGUE

In reading the literature on compressed air work as related to Navy diving, I was prepared to see vestibular implications if they were present since my previous work in aviation medicine dealt mainly with vestibular functions. However, I became impressed with the frequency with which aspects of that sensory system were mentioned throughout the research literature: as a symptom of decompression sickness, ancillary to auditory problems, or in connection with disorientation, etc. Yet general reference works (Hoff, 1948; Greenbaum and Hoff, 1954; Greenbaum and Hoff, 1966) and manuals (e.g., Navy Diving Manual, 1970*) did not appear to deal in any formal way with problems which may center around this organ complex, and general textbooks often merely indicated that additional work is needed in this area.

A file of over 1,000 general references on "vestibular functions" was consulted and it appeared that only about a dozen articles dealt specifically with vestibular functions under water and pressure. Many more articles were probably important to an understanding of the role of the vestibular apparatus under water and compressed air, and these references do not generally appear in the diving literature. Furthermore, I knew of no "vestibular scientist" actively engaged in compressed air study and there is evidence that a correspondence

*Cited in bibliography.

between the two exists and is increasing (cf. Rubenstein and Summitt, 1970*). I therefore decided to merge studies of vestibular function which I felt were applicable to work in a compressed air environment with studies of compressed air work involving the vestibular apparatus in some way.

I decided to organize the studies into subject matter categories, so I "forced" each citation into one of six bins. When an article had broader application it was placed into the most appropriate category and cross-referenced at the end of the other categories to which it applied. Occasionally such a study had been published as a government report and as a journal article as well, or similarly in two journals, or was one of a series; in these cases an entry was made in two categories.

The available literature was searched in several ways: (a) modern sources were consulted and references which were cited therein were backtracked, (b) the overall vestibular literature was surveyed, (c) the "Sourcebooks" (Hoff, 1944; Greenbaum and Hoff, 1957; Greenbaum and Hoff, 1966; Shilling and Werts, 1971) were consulted and articles were skimmed or read as needed. Occasionally, when it was not possible to "see" hard copy of an article for one reason or another, the notation ".V." (not viewed, therefore not verified) appears. In those instances, unless the source of the reference is specified, the source was one of

*Cited in bibliography.

the "Sourcebooks" previously listed, (d) experienced workers were consulted for leads. These people were either "vestibular scientists" or "hyperbaric scientists", (e) since studies of vestibular functions have historically enjoyed more popularity outside the United States than in it, particular attention was paid to articles which were not published in English. When titles, abstracts, or entire articles were translated by others this information is included in the text.

The implication of a particular article is carried sometimes in the title; when it isn't, the results are also listed in the text. For the most part, however, it was felt that an interpretation of the meaningfulness of the findings would be more useful for the reader and so most articles are annotated. Generally, I introduced my own opinions and interpretations regarding the application or implication of a reference. When this was done, I usually indicated I had taken this liberty by the notation "(RK)." Sometimes it was felt that a reference would be more meaningful in connection with another. When this was the case, the other article(s) were cross-referenced in the annotation.

In the course of assembling this bibliography, it was apparent that many of the vestibular findings reported in the earlier literature were not always known to later writers. To point this out, the literature throughout this bibliography is listed chronologically within each category. An author index also appears at the end of the bibliography. Each article has a unique identification number. Journal title abbreviations used were taken from the List of Journals Indexed in Index Medicus,

1972, or from ACCESS, Key to the Source Literature of the Chemical Sciences, 1969 edition.

As mentioned above, each article was placed into what was considered the most appropriate category. Six categories were employed:

1. Vestibular symptomatology reported in connection with compressed air work.
2. Clinical diagnosis of vestibular symptoms with relevance to hyperbaria.
3. Provocative tests of the positive function of the vestibular apparatus to be used as pre-post measurements of normal functioning.
4. Illusory phenomena occasioned by water and similar environments which may involve or interact with vestibular functions.
5. The potential use of the vestibular system as a navigation aid under water.
6. Relevant auditory studies.

Category I generally contains articles which report vestibular symptoms in connection with decompression sickness. Occasionally a methodology paper which would be useful in studying this problem is included. If an article appeared more diagnostic than descriptive it would be included in Category II. For example, some reports of aerotitis media report vestibular symptoms, are diagnostic, but also report auditory problems. These therefore may appear in Categories I, II or VI.

Compression also produces problems and while articles reporting decompression sickness symptoms make up the largest part of this section, compression and isobaric studies are also included.

When pathology is discussed the article may appear in Categories I or II.

Category II contains papers which it is felt would be useful in the diagnosis of involvement of the vestibular system or its central pathways, although most of the citations are to papers which do not mention hyperbaria per se. Some overlap exists between Category II and Categories I and III and, to a lesser extent, Category IV. An effort was made to include modern, representative studies in this category, and the earlier literature which may contain similar studies is not always included since it is felt that new diagnostic approaches would supercede older ones and provide reference to the earlier, if the latter were of interest.

Category III lists the many methods for measuring the integrity of the vestibular apparatus for the primary purpose of describing normal function, or what is normal for that individual. Papers contained within this category can be used to assemble a battery of tests for specific or general purposes. Thus, if pretesting is performed prior to a dive (or to a career in diving) post-testing can then be employed to show deficits if they occur. Some of these tests reported may also be used to indicate whether this organ system and its pathways is being affected by the experimental condition whilst the condition is on-going (e.g., during an extended dive).

Category IV includes papers which discuss perception in general as well as those which discuss aspects of the kinds of perceptual environments that may be encountered under water and pressure.

In this section, for example, there are reports describing submersibles and there are reports of the effects of motion on perception. Also, because water immersion was used to simulate the weightlessness of space flights, and because perceptual problems were mentioned in these reports, some articles from this literature are included. Motion sickness as a diving problem may be of importance only indirectly (viz., a diver is often transported to his dive site and tended by a boat). However, the consequences of sea sickness to a diver who later dove could be fatal, thus a recent review of motion sickness is included (Money, 1971*).

Category V includes representative and general works regarding animal orientation, navigation, homing and migration as well as the few studies which dealt directly with human abilities to perform these operations. Several studies of importance for this category may also be found in Categories III or IV.

The list of animal navigation studies is not meant to be exhaustive but rather representative of the kind of cues that are being studied in that literature. The studies referenced generally are: a major conference with many articles, by a significant person in the field, contain a good bibliography, or are recent articles.

Category VI includes articles dealing with auditory problems. These articles were obtained during the course of obtaining the

*Cited in bibliography.

references cited in Categories I to V above. These articles are included because of the similarities of vestibular and auditory systems, but the list is not meant to be complete or representative. The auditory articles are concerned mainly with barotrauma of the tympanic membrane, Eustachian tube, etc., or hearing loss or "sudden deafness."

Generally, tests of these injuries involve auditory tests and auditory symptoms (e.g., tinnitus), although vestibular involvement (e.g., vertigo) and tests (e.g., caloric) may be included.

The overall purpose of this bibliography is to call attention to the incidence of vestibular involvement in compressed air work, and to provide reference to the background material essential for understanding and future study of these problems.

CATEGORY I. VESTIBULAR SYMPTOMATOLOGY AS A SIGN OF DECOMPRESSION SICKNESS (COMPRESSION EFFECTS: ISOBARIC?)

1870-1899

1. BAUER, L.
Pathological effects upon the brain and spinal cord of men exposed to the action of a largely atmospheric pressure.
The Saint Louis Medical and Surgical Journal, R. P. Studley & Co., 1870.
A report of the Mississippi Bridge works in St. Louis; historically interesting.
2. SMITH, A. H.
The effects of high atmospheric pressure, including the caisson disease.
pp. 1-53. Brooklyn: Eagle Print, 1873.
The book describes experiences connected with building the Brooklyn Bridge. This is an excellent and little referenced study. It contains early references to animal studies (pp. 23, 24); use of pressure to treat illness (pp. 23, 24); adaptation effects (pp. 20, 34); constitutional factors (p. 37); and cardiovascular effects (p. 20). Vestibular and auditory difficulties are mentioned throughout (particularly p. 27 ff.). Smith feels a first-order problem in compressed air work is on "effect on hearing (p. 17)." He coined the term, "Caisson Disease (p. 25)."
3. TREITEL.
Die rupturen des trommelfelles mit besonderer berucksichtigung ihrer forensischen bedeutung.
Zeitsch. f. Ohr., Ed. XIX:115, 1880. (Cited by Lestienne, 1932; cited by A. Pagano, 1959.)
4. VAN RENSSELAER, H.
The pathology of the caisson disease.
Trans. N.Y. State Med. Soc. pp. 408-444, 1891.
One of the earliest articles written in America. Historically, very interesting with an exhaustive bibliography, particularly of the French literature. Vestibular symptoms as prodromal signs (p. 414), obesity (p. 438), adaptation (p. 439), and cerebellar implications (p. 440), as well as case histories, are included.
5. BOBINSON, T. H., and A. CUTHBERT.
Paralysis caused by working under compressed air in sinking the Foundation of Londonderry New Bridge.
Dublin J. Med. & Sci. (N.S.) 36:312-318, 1893. N.V.
6. CURNOW, J.
Auditory vertigo caused by working in compressed air.
Lancet ii:1088-1089, 1894.
One of the earliest and certainly the most descriptive report of vertigo in compressed air. An excellent paper.
7. HELLER, R., W. MAGER, and H. von SCHROTTER.
Vorlaufige Mittheilung über Caissonarbeiter. (Introductory report on caisson workers. Trans. by Mrs. A. Woke, NMRI, 1972.)
Wien Klin. Wochenschr. 8:475-476, 1895.
An early report of decompression sickness which refers to Meniere-like symptoms. Describes the early experience of the authors with the caisson at Nussdorf. The entire report later appeared as a book.

8. SILBERSTEIN.
Sur kasuistik des caissonkrankheiten.
Wien Med. Woch. N:31, 1895. (Cited by Lestienne, 1932; cited by A. Pagano, 1959.) N.V.
9. ALT, F.
Ueber apoplectiforme Labyrintherkrankunge bei Caissonarbeitern. (Concerning apoplectic-form labyrinth diseases in caisson workers. Trans. by Mrs. A. Woke, NMRI, 1971.)
Monatsschrift fur Ohrenheilkunde 30:341-349, 1896.
 Reviews the early literature on ear (labyrinthine) problems from pressure, and although the author considered the previous literature small, he offers about 20 references. He calls attention to the large number of ear diseases that von Schrotter was discovering at the Nussdorfer Spitz floodgate, reports cases, and offers theories regarding etiology. He also reports on animal tests and performed ear sections, but shows no slides in the printed version of his talk.
10. SNELL, E. H.
Compressed air illness (or so-called caisson disease).
 London: H. K. Lewis, 1896.
 The author claims this article to be one of the first reviews in English (but see Smith, 1873, #2). It is excellent for its description of disorders involving the auditory and vestibular systems. In reports on vertigo (pp. 29, 10) and vomiting (p. 57) in tunnel workers Snell claims that "...cases of auditory vertigo...have not previously been met with and recognized by writers on the subject (p. 74)." He mentions thickening of the tympanic membrane due to constant "accommodation of the ear (p. 116, 117)." Case histories of vestibular involvement begin on p. 98.
11. ALT, F., R. HELLER, W. MAGER, and H. von Schrotter.
Pathologie der Luftdruckerkrankungen der Gehororgans. (Pathology of air pressure diseases of the auditory organs. Trans. by Mrs. A. Woke, NMRI, 1972.)
Monatsschrift fur Ohrenheilkunde 31:229-242, 1897.
 Auditory problems occasioned by pressure changes in general are discussed; also labyrinthine diseases caused by gas emboli after rapid decompression, with figures which show lesions in the cochlea and semicircular canals (p. 239). The authors describe the symptoms reported by workers as including dizziness, tinnitus, vomiting, "reeling like drunkards (p. 240)," inability to stand on one foot (Romberg). They also report cases described by previous workers: Noos, Gruber, Ekert, Pol and Watelle, Gal, Gerard, Catsaras, and Snell, plus twelve of their own. Animal studies of rapid decompression from 5 ata showed hemorrhages in various places within the labyrinth particularly in the semicircular canals.
12. HOCHÉ, A.
Ueber die Luftdruckerkrankungen des Centralnervensystems. (Air pressure diseases of the central nervous system. Trans. by Mrs. A. Woke, NMRI, 1972.)
Berlin. Klin. Wochenschr. 22:464-469, 1897.
 A very good early paper. Spontaneous nystagmus (p. 465), dizziness, etc., are mentioned.

1900-1909

13. BARATOUX, J.
Des accidents survenante du cote de l'oreille dans l'air comprime.
Indipend. Med. VI:114, 1900. (Cited by Lestienne; cited by A. Pagano, 1959.) N.V.

14. HELLER, R., W. MACKER, and H. von SCHROTTER.
Luftdruck-Erkrankungen, mit besonderer Berücksichtigung der sogenannten Caissonkrankheit. Vols. 1 and 2
Vienna: A. Holder, 1900.
- Many authors (e.g., Keays, 1909, #22; Hill, 1912, #25; Behnke, 1951, #85; 1969, #225) have used these volumes for basic data regarding vestibular symptomatology and decompression sickness, but the works themselves have not been formally translated. Reporting similar data, articles by Alt (1896, #9; 1897, #11), Heller, et al. (1895, #7), and von Schrotter (1904, #16) are found elsewhere in this bibliography.
15. ROPKE.
Die berufskrankheiten des ohres und der oberen Luftwege.
J. E. Bergmann. Wiesbaden, 1902. (Cited by Philip; Cited by A. Pagano, 1959.) N.V.
16. VON SCHROTTER, H.
Zur Pathogenese der sogenannten Taucherlähmung.
(The pathogenesis of so-called diver paralysis. Trans. by Mrs. A. Woke, NMRI, 1972.)
Verhandlungen der deutschen pathologischen Gesellschaft 8:136-138, 1904.
A report of post-mortem spinal cord observations (with 2 figures) in 3 divers, one of whom had dizziness.
17. PHILIP, M.
Des accidents auriculaires dans les travailleurs des caissons.
Ann. Mal. Or. 140, 1907. (Cited by A. Pagano, 1959.) N.V.
18. TORRETTA.
Lesioni del labirinto non acustico.
Il Policlinico, 1907. (Cited by A. Pagano, 1959.) N.V.
19. BERRUYER, G.
Les accidents auriculaires chez les Travailleurs des caissons.
Bull. de Laryng. Otol. Rhin., 199, 1908. (Cited by A. Pagano, 1959.) N.V.
20. BOYCOTT, A. E., G. C. C. DAMANT, and J. S. HALDANE.
The prevention of compressed-air illness.
J. Hyg. (Camb) 8:342-443, 1908.
They indicate that as far as "mechanical symptoms (p. 388)" are concerned, goats do not appear to suffer from ear problems as men do. However, behavioral measures of VIIIth nerve involvement are difficult to accomplish. They describe that a "fair number of cases have occurred when the animal is obviously ill (p. 387)." It may be that vertigo or other vestibular symptoms were present. See Brauer, et al., (1971, #266).
21. BLICK, G.
Notes on diver's paralysis.
Br. Med. J. 2:1796-1798, Dec. 25, 1909.
An early paper.
22. KEAYS, F. L.
Compressed air illness, with a report of 3,692 cases.
Cornell University Medical College, Ithaca, New York, Researches from the Department of Medicine 2, October 1909.
One of the most quoted works on the epidemiology of decompression sickness. A good paper. The author claims that 5% of all cases had vertigo as the "most characteristic symptom (p. 38)"; he suggests labyrinthine hemorrhage was the cause. Perhaps more cases of vertigo occurred, but as accessory symptoms to joint pain (See Hill, 1912, p. 78 ff., #25; Adler, 1964, p. 74 ff., #154.) The author appears to suggest saturation diving (p. 50). Good references to the earlier literature.

23. POLI, C.
Resultati dell'esame preventivo dell'orecchio nei lavoratori in aria compressa.
Policlinico. Sag. Prat. XVI:210, 1901. (Cited by A. Pagano, 1959.) N.V.

1910-1919

24. BRYANT, W. S.
Occupational diseases of the ear, nose and throat.
J. M. New York, XII:295, 1912. (Cited by A. Pagano, 1959.) N.V.
25. HILL, L.
Caisson sickness, and the physiology of work in compressed air.
London: Edward Arnold, 1912.
A very important review of the earlier work includes slides (fig. 36, p. 83) from von Schrotter (1904, #16) of lesions in semicircular canals. Reviews work of Heller, Mager, & von Schrotter (1900, #14), (Danube caisson works), where involvement of the auditory and non-auditory labyrinth may have been as high as 28% of all cases.
26. BASSOE, P.
The late manifestations of compressed-air disease.
Am. J. Med. Sci. 145:526-542, 1913.
Should be read with Boot's (1913, #27) paper. Bassoe reports "ear affections," in "87 of the 161 men (p. 541)"; "33 complained of dizziness," "6 of vomiting" (p. 527); "6 had blind staggers, that is, labyrinthine vertigo, with nystagmus (p. 527)."
27. BOOT, G. W.
Caisson workers' deafness.
Ann. Otol. Rhinol. Laryngol. 22:1121-1132, 1913.
Boot mentions vestibular problems (p. 1131) and also indicates that the vestibular system often continues to function even though hearing losses occur. However, his index of vestibular function is probably an ice water caloric, which may not be a sensitive enough test for showing graded amounts of hypofunction (yet ice water calorics are often used in modern times). (RK)
28. BERRUYER, G.
Les accidents auriculaires chez les travailleurs des caissons.
Bull. de Laryngol. St. Louis, XXII:1121, 1913. (Cited by A. Pagano, 1959.) N.V.
29. ERDMAN, S.
The acute effects of caisson disease or acropathy.
Am. J. Med. Sci. 145:520-526, 1913.
Describes somewhat differently the same data reported by Keays (1909, #22). Considers vertigo to possibly "...be due to cerebellar gas embolism" or bubbles in labyrinth (p. 523). Shows 88% of cases had pain "either as the only symptom or associated with others (p. 523)." (Underlining mine (RK)) Because percent incidences sum to 100, one wonders if vertigo (for example) appeared in "more than 5%" (p. 523) as reported, or if vertigo was a prominent symptom in >5% but was an accessory symptom in some of the 88% who reported pain. (RK)
30. ANDREWS, A. H., L. W. ROTH, and A. C. IVY.
On the use of reduced atmospheric pressure in the treatment of paranasal sinusitis.
Quart. Bull. North. W. Med. Univ. School 46:41, 1915.

1920-1929

31. LEVY, E.
Compressed-air illness and its engineering importance (with a report of cases at the East River Tunnels).
Bureau of Mines Technical Papers No. 285, Washington, D.C., 1922.
A report of 680 cases of DCS. Vertigo as a major symptom occurred in 6.5%; localized pain in 91.8%. In this report, as in Keays (1909, #22), there is no record of whether vertigo appeared as an accessory symptom or as a premonitory sign of pain (although it probably did). Therefore, the true incidence of vertigo is probably undetermined.
32. GORDON, L.
Die Bahnkrankheiten der Gehororgans.
Zbl. Habs. Nas. u. Ohrenheilk 9:433-461, 1926. N.V.
33. VAIL, H. H.
Traumatic conditions of the ear in workers in an atmosphere of compressed air.
Arch. Otolaryngol. 10(2):113-126, 1929.
This paper reviews the earlier work of Alt (1896, #9), Keays (1909, #22), etc., and calls attention to the fact that the U.S. Navy had no record of "admission to the sick list for damage to the ears considered due to diving activity (p. 114)." Reasons are given and two cases histories are reported.

1930-1939

35. HILL, L.
Deep-sea diving.
J. R. Nav. Med. Serv. 18(8):157-173, 1932.
A good paper of historical interest mentions "giddiness" (p. 165) and alludes to perceptual difficulties attendant upon the environment.
36. LESTIENNE, J.
Des accidents labyrinthiques chez les ouvriers des chantiers de travail à l'air comprimé (maladie de caissons). (Labyrinthine accidents occurring in workers performing jobs in compressed air. Caisson disease. Summary Trans. by F. Russo, NMRI, 1972.)
Ann. oto-laryng. (Paris) 2:200-217, 1933.
Following a brief historical review, the author discusses case histories from compression and decompression accidents. He states compression accidents often resulted in functional damage which recovered; decompression accidents affected the nerve and were not recoverable. State-of-the-art and methods of treatment (e.g., recompression) are discussed. A good biophysical reference for decompression sickness.
37. BERTOIN, R.
Pronostic éloigne des accidents labyrinthiques par décompression.
Ann. oto-laryng. (Paris) 407, 1934. (Cited by A. Pagano, 1959.) N.V.

Compressed air illness with special reference to the middle ear.
Indust. Med. 9:115-121, 1940. N.V.

51. REQUARIN, W. N.
Aero-Otitis media in compressed air workers; treatment with helium-oxygen mixtures.
J.A.M.A. 116:1766-1769, 1941.
52. SHILLING, C. W.
Compressed air illness. III through VI.
U.S. Navy Med. Bull. 39:235-259, 1941a.
- A continuation of a previous paper with special mention of the fact that "Meniere's symptom complex is relatively common and vertigo, either alone or associated with other symptoms, is frequently noted (p. 237)," but no reference is given. The reference list is otherwise very complete, much of it not often reviewed by modern authors.
53. SHILLING, C. W.
Compressed air illness.
U.S. Navy Med. Bull. 39:367-376, 1941b.
(Review of literature 1936-1940 incl.)
- An update of the previous paper where "joint pathology" and "otological effect(s)" are considered the two special problems, i.e., "given more notice than before "(p. 309). Four references to the latter problem are given, and nine to the former. This paper probably dates a turning point in DCS studies toward an increased emphasis on joint pathology. (NK)
54. ALMOUR, R.
Industrial otology in caisson workers.
N.Y. State J. Med. 42:779-785, 1942a.
- Mentions a Meniere-type syndrome and gives a good review. A good discussion follows.
55. BEHNKE, A. R.
Physiologic studies pertaining to deep sea diving and aviation, especially in relation to the fat content and composition of the body.
The Harvey Lectures 37:198-226, 1942a.
- A good description of bubble formation and fat. The central nervous system and vestibular system may have a relatively high fat content compared to other structures.
56. CAMPBELL, P. A.
Acrosinusitis.
Arch. otolaryngol. 35:107-114, 1942.
57. SHILLING, C. W., and EVERLEY, I. A.
Auditory acuity in submarine personnel. Part III.
U.S. Navy Med. Bull. 40(3):634-636, 1942.
- This article contains a good bibliography of earlier work plus case histories of the authors. The distinction is made between barotrauma-type problems which result in vestibular and auditory problems versus Meniere-like syndromes most likely due to nitrogen bubbles causing "aural lesions (p. 669)." Vertigo as an accompanying symptom is mentioned (p. 675).
58. BERT, P.
Increased pressure. In Barometric pressure. Researches in experimental physiology, 1873. Trans. by M. A. Hitchcock, and F. A. Hitchcock. Chapter I, 353 ff. Columbus, Ohio: College Book Co., 1943.
- In this classic, case histories of Bert's and others are reported. Vertigo, "dizziness," "vomiting" (p. 363) are mentioned frequently. For example, the author had the bends and vomited. "...reflex movements [of the eyes] caused by the slightest stimulus (p. 381)" may be an example of nystagmus. "...sight was affected, and I saw my arm moving much as one perceives objects after he has whirled about several times (p. 385)," may be an example

- of the oculogyrical illusion (Graybiel & Hupp, 1946, #536) (RK) "I was dizzied and my eyes refused to serve me at all. I saw only at long intervals, and for a second at the most, then everything disappeared to reappear only after a few moments in the same way (p. 385)." It may have been nystagmus. (RK)
59. DICKSON, E. D. D., J. E. G. McGIBBON, and A. C. P. CARTRELL.
Acute otitic barotrauma-clinical findings, mechanism and relationship to the pathological changes produced experimentally in the middle ears of cats by variations of pressure.

Studies on altitude decompression sickness. I. Symptomatology.
J. Aviat. Med. 17:333-342, 1946.
Nausea, vomiting, pallor, sweating, faintness (p. 339) are considered circulatory reactions in this report.
68. HAINES, H. L., and J. D. HARRIS.
Aerotitis media in submariners.
Ann. Otol. Rhinol. Laryngol. 55:347-371, 1946.
A good review of the problem, mentions vertigo as one of the symptoms.
69. KELLY, W. J., and H. W. LANGHEINZ.
Dental treatment for the prevention of aerotitis media.
Ann. Otol. Rhinol. Laryngol. 55(1):13-28, 1946.
The authors report a successful dental treatment in 46 of 50 cases of persons diagnosed with aerotitis media in submarine training. A similar

- effort could perhaps be made in diver training where a careful ... and dental examination might be performed after tests for ability to clear the ears are conducted. This might: (a) return to training persons who fail; (b) identify persons who could develop chronic problems later in their diving careers. Behnke (1969, #225) reports that in "...5 to 25% of all compressions to 50 psi (about 150,000 compressions) applied to American submarine personnel...[the personnel] have been unable to accommodate readily to the excess pressure (p. 261)." See other articles by the senior author.
70. LENTINE, J.
A review of one hundred cases of acute aero-otitis.
Arch. Otolaryngol. 43:293-297, 1946.
71. LUND, D. W., J. H. LAWRENCE, and L. B. LAWRENCE.
Latent neurologic manifestations following decompression.
J. Occup. Med. 1:75-80, 1946.

Dizziness and vomiting are reported, among other findings.
72. BEHNKE, A. R.
A review of physiologic and clinical data pertaining to decompression sickness.
Naval Medical Research Institute, Bethesda, Md., Report No. 4,
Project No. X-443, 13 May 1947.

An excellent review of DCS and one of the few works to review directly (see Table 4) the studies of Heller, Mager, and von Schrotter (1895, #7). Of those with DCS: they report 70% bends, 8% vertigo and Meniere's, 6% "choke," 4% sensory disturbances, and 12% motor paralysis; the latter two may also contain vestibular involvement. (RK) Although not widely available, this is a very good report. See also Behnke (1971a, #261) for a similar updated report.

U.S. Navy Submarine Medical Center, New London, Conn., Report No. 1, Project NM 002 016.01, 2 June 1952.

If vestibular problems are increasing in incidence, techniques described in this article will be useful in studying the true base rate in diver population.
94. PORTMANN, M., and G. PORTMANN.
Auricular disorders due to a brutal decompression.
Med. J. (Bordeaux) 129(11):1055, 1952. N.V.
95. BERTOIN, R.
Evolution clinique des accidents labyrinthiques survenant chez les ouvriers travaillant en air comprimé. (Clinical evolution of labyrinth accidents in the ears of compressed air workers.)
Arch. Mal. Prof. 14:221-224, 1953.

The author asks for better diagnostic categorization of these maladies. He also feels that some chronic cases of VIIIth nerve disorder (balance problems, etc.) worsen with time.
96. CHOSSEGROS, H., L. ROCHE, and L. MIGEON.
Les Atteintes vestibulaires graves dans la maladie des caissons.
(Grave vestibular hits in decompression sickness. Partial translation by F. Russo, NMRI, 1972.)
Arch. Mal. Prof. 14:211-220, 1953.

The author differentiates between vestibular hits in dam workers due to compression and those due to decompression. It is his opinion that the latter are more traumatic and are more likely to be chronic.
97. McCALLUM, R. I., and D. N. WALDER.
Compressed-air illness on Tyneside.
Lancet 1:464-467, 1953.

Vomiting is reported in 1 of 2 cases, but is most likely due to causes other than vestibular.
98. PAGANO, A.
Ricerche audiometriche nei barotraumi da cassoni.
Arch. Ital. Laring. 61:254-265, 1953.

99. CLARK, B., and M. A. NICHOLSON.
Aviator's vertigo: A cause of pilot error in naval aviation students.
J. Aviat. Med. 25:171-179, 1954.
100. PATON, W. D. M., and D. N. WALDER.
Compressed air illness. An investigation during the construction of the Tyne Tunnel, 1948-50.
Medical Research Council Special Report Series No. 281. London: Her Majesty's Stationery Office, 1954.
- The main symptoms recorded were: "Pain, aching, burning, gripping, stabbing, tingling (p. 10)," and perhaps for this reason vestibular symptomatology is being underestimated, since there is no category for recording it.
101. ROGER.
Variations de l'EEG chez l'homme en fonction de la pression.
Rev. de Neurol. 51:6, 1954. (Cited by A. Pagano, 1959.) N.V.
102. AMBROSIO, L., V. MAZZA, and C. SERRA.
Comportamento della attivita elettrica corticale e dell equilibrio elettrolitico in operai affetti da mal dei cassoni.
(Status of the cortical electric activity and of the electrolyte equilibrium [balance?] in workers affected by caisson sickness.)
Acta Neurol. (Napoli) 10(6):879-906, 1955.
- Electrolyte imbalances relative to EEG changes in connection with compressed air work are reported. There is a relationship of EEG changes to the high pressure nervous system syndrome (Bennett & Touse, 1971, #264) possible relationships of fluid balance to decompression sickness (Warwick, 1942, #309; 1943, #311) and Meniere's disease (Simpson, 1965, #424) elsewhere in this bibliography. Also numerous labyrinthine symptoms in case histories are reported (pp. 883-893).
103. BEHNKE, A. R.
Decompression sickness.
Milit. Med. 117:257-271, 1955.
- A review paper with minor mention of vestibular involvement as a symptom of DCS, although dizziness and nausea are included in several case histories.
104. HAYMAKER, W., and A. D. JOHNSTON.
Pathology of decompression sickness. A comparison of the lesions of airmen with those in caisson workers and divers.
Milit. Med. 117:285-306, 1955.
- The authors describe their own findings in relation to a very large literature. A good bibliography is included.
105. KOMENDANTOV, G. L.
Vestibular nystagmus in conditions of lowering barometric pressure.
In The functioning of organisms under conditions of changing gaseous environments. p. 53. Moscow, Leningrad: Academy of Sciences, USSR, 1955.
 (In Russian, trans. by J. Diachenko, NMRI, 1972.)
- Changes in post rotational nystagmus (induced by rotation) were noted as a function of altitude. In general, changes begin to occur above 5,000 meters.
106. KRATOCHVIL, C. H.
The contributions of Alphonse Jaminet to an understanding of decompression sickness.
J. Aviat. Med. 27:59-63, 1956.
- Of historical interest, and indicates Jaminet himself suffered dizziness after decompression.

107. ADES, H. W., A. GRAYBIEL, S. M. MORRILL, G. C. TOLNURST, and J. A. NIVEN.
Nystagmus elicited by high intensity sound.
U.S. Naval School of Aviation Medicine, Pensacola, Fla., Joint Project
NM 13 01 99, Subtask 2, Report No. 6, 15 February 1957.

Because vestibular responses are obtained in deaf persons by noise and because compression chambers are noisy, vestibular testing at depth must take this relationship into account.

Late consequences of the neurological forms of decompression sickness.
Br. J. Ind. Med. 16:311-317, 1959.
This paper is a report of a follow-up of the cases first seen and reported in a previous report (Rozsahegyi & Soos, 1956, #122a). Relative to the vestibular system and its central connections is a "pseudo Meniere's syndrome" which is central rather than peripheral and is probably caused by a lesion of the medullary vestibular nuclei. It is often associated with paraplegia and signs of syncope or parasympathetic disturbances. From the author's description one is reminded of the report by Simpson (1965, #424) that prior to his death, Meniere was attempting to relate the disease which bears his name to forms of migraine and was suggesting fluid retention as a similar mechanism for both. The paper by Engál, (1944, #61) on migraine-like symptoms in DCS is also worth noting. Further, the comment often made (cf. van Rensselaer, 1891, #4) that diuresis occurs in compressed air workers and high fluid exchange rates as part of a person's habit afford some protection from DCS. The fact that sodium excretion is reduced by compression (Radomski & Bennett, 1970b, #505) and ADH is released during unusual vestibular stimulation (Taylor, et. al., 1957, #363) may all be connected.

Decompression sickness during construction of the Dartford Tunnel.
Br. J. Ind. Med. 17:167-180, 1960.

This paper points out the difficulty in adequately assessing the incidence of decompression sickness of vestibular origin. First, only cases severe enough "for the man to bring himself back for treatment are included (p. 168)." Second, it would appear that pain as a symptom (perhaps accompanied by dizziness) would still be classed as type I. Nonetheless, after pain, vertigo is the next largest symptom category. The authors also report that type II symptoms when they appear, do so with shorter latency than type I, and so, if compressed air workers were alert for their appearance, it is possible mild, type II symptoms could be used as an early sign of type I, and recompression could begin sooner.

Otologische Untersuchungen bei Caissonarbeitern. (Otological investigations on caisson workers. Trans. by Mrs. A. Woke, NMRI, 1972.)
Arch. Gerverbepathol. Gewerbehyg. 18:384-393, 1961.
- The article reviews well the literature of labyrinth problems in compressed air work. It shows that evidence of auditory (hearing) and vestibular (caloric) loss is greater in a group of workers who had had acute caisson disease than in a group of workers who hadn't; the latter also had larger deficits than would be expected although a normal (control) group was not studied. Etiology is discussed.

Comments on therapeutic recompression.
In Proceedings Second symposium on underwater physiology, February 25-26,
1963, Wash., D.C. pp. 57-65. Wash., D.C.: National Academy of Sciences--
National Research Council Publication 1181, 1963.

The author reports that most persons had pain only (62%). The remainder
had other symptoms with or without pain. Many of these other symptoms

could have a vestibular basis. If a liberal criterion of what constitutes vestibular involvement is employed, 50% might involve the vestibular system (e.g., nausea, vertigo, disorder of sensations, etc.).

153. RIVERA, J. C.
Decompression sickness among divers: an analysis of 935 cases.
U.S. Navy Experimental Diving Unit, Wash. D.C., Report No. 1-63,
1 February 1963.

One of the very best epidemiologic studies of DCS. Table 14 (p. 12) shows the frequency of signs and symptoms. Those individual symptoms which could be due to vestibular involvement are reasonably prominent. It is felt that vestibular symptoms when reported occur often enough as initial manifestation and should be emphasized more to divers as possible premonitory signs of more painful or serious DCS.

O neurologickych formach dekomprezivni nemoci (kesonove a potapacski nemoci). (The neurological form of caisson disease.)
Cesk. Neurol. 29(6):391-395, 1966.
ENGLISH SUMMARY (from the journal article)
The author gives a survey of his experience with caisson disease. He distinguishes 4 types of the disease: disperse focal lesions of the CNS, a syndrome of multiple lesions of the cerebral hemispheres and the upper brain stem, a syndrome of affection of the rhombencephalon and a spinal cord syndrome. He further deals with the acute and the primary and secondary chronic form of the disease. He stresses the frequency of vegetative and mental changes as well as the variability of the clinical picture of this affection.

EEG studie dekomprezivni nemoci. (EEG study of caisson disease.)
Cesk. Neurol. 29(6):386-390, 1966a.
Where labyrinthine forms of caisson disease had occurred, 50% had EEG abnormalities; where CNS forms of caisson disease had occurred, 67% had abnormal EEG'S.
189. ROZSAHEGYI, I., and B. ROTH.
Participation of the central nervous system in decompression.
Ind. Med. Surg. 35:101-110, 1966b.
This and other papers by this author describe residual neurological deficits in compressed air workers and of particular interest are involvements of vestibular apparatus and its central connections. These deficits even occur in caisson workers without a history of decompression sickness episodes (although the latter difference is small). The highest "sleep activity (p. 104)" disturbances

occurred in the group "touched by labyrinthopathy (p. 104)." Divers should be encouraged to be more candid about symptoms of DCS, particularly when the symptom is of a vestibular or central nature. (RK)

190. TERRY, L., and W. L. DENNISON.
Vertigo among divers.
U. S. Naval Submarine Medical Center, Groton, Conn., Special Report No. 66-2, 8 April 1966.

A lower rate than found by Lundgren (1965, #166) but still substantial. The authors differentiate alternobaric vertigo from other etiologies.

Compression problems involving the ear are discussed.

192. WALDER, D. N.
Some problems of working in an hyperbaric environment.
Ann. R. Coll. Surg. Engl. 38:228-307, 1966. N.V.

193. BARNARD, E. E. P.
The treatment of decompression sickness developing at extreme pressures.
In C. J. Lambertsen (Ed.) Proceedings of the third symposium on underwater physiology. pp. 156-164. Baltimore: The Williams & Wilkins Co., 1967.

Case histories of decompression sickness occurring during ascent to the surface are presented and their treatment discussed. Unlike cases that occur at the surface, relief from symptoms occurred at a pressure difference of only 60 feet. Very small pressure fluctuations (one foot out of eighty) were sufficient to cause noticeable changes in symptoms. Further, pain occurred immediately and acutely after pressure drops.

194. BENNETT, P. B.
Performance impairment in deep diving due to nitrogen, helium, neon and oxygen.
In C. J. Lambertsen (Ed.) Proceedings of the third symposium on underwater physiology. pp. 327-340. Baltimore: The Williams & Wilkins Co., 1967.

In connection with a study on performance, the author reported that at 600 feet "dizziness and nausea and very occasionally... vomiting" occurred "during the latter part of the exposure or at the initial stops during decompression (p. 334)."

195. BORASI, G., and G. SPERATI.
I. Ipoacusie improvvisate nei sommoszefori. (Summary in English.)
Ann. Lar. Ot. Rin. Far. 66:897-905, 1967.

Two of three divers reported vertigo; one had "ipo-reflessia vestibulare sempre a destra (p. 898)," that is, suppressed response in the right ear.

196. BUHLMANN, A. A., and W. WALDVOGEL.
The treatment of decompression accidents.
Helv. Med. Acta 33:487-491, 1967. (In English)
- The authors report that from their experiences approximately 1 in 8 accidents from deep chamber exposures (11-23 ata) involved the labyrinth and nearly all (9 of 11) of these required treatment. Of the remaining accidents (71), 22 did not require treatment. The only case of permanent damage involved the labyrinth (hearing).
197. DOLL, R. E., and T. E. BERCHAGE.
Interrelationships of several parameters of decompression sickness.
U. S. Navy Experimental Diving Unit, Wash., D. C., Report No. 7-65,
1 March 1967.
- The coding of DCS symptomatology is shown in an appendix to this paper. The codes for different symptoms which could be a reflection of vestibular involvement tend to have high numbers (e.g., 12 and 20 for "dizziness/vertigo," and "equilibrium disturbance" (p. 28), and tend not to be grouped together. Both of these factors could cause underestimation in reporting and data analysis.
198. GOULON, M.
Resultats de l'oxygenotherapie hyperbare dans 13 cas de'embolie gazeuse cerebrale et dans 10 cas d'accident de decompression chez des tubistes. (Results of hyperbaric oxygen therapy in 13 cases of cerebral gaseous emboli and 10 cases of decompression accidents in pipe workers.)
Anesth. Analg. (Paris) 24(4):431-438, 1967. N.V.
199. GREGG, J. B., and M. R. FERRELL.
Cochlear and vestibular damage from middle ear pressure change.
Eye Ear Nose Throat Mon. 46:464-470, 1967.
- Although most of the references are "Personal Communication" this article is a good source for additional cases of vestibular involvement due to pressure.
200. MCCALLUM, R. I.
Decompression of compressed air workers in civil engineering.
Great Britain: Oriel Press, 1967.
- Many good articles appear in this collection. The entire book should be perused. An item in the Introduction is of interest: if a joint pain (bends) occurs in about 1% of all decompressions (cf. Doll, 1965, #163; Keays, 1909, #22; Patton and Walder, 1954, #100; and articles in this book), but 19% of "tunnellers in compressed air who were symptomless...had bone lesions (p. vii)," then perhaps a similar relationship exists between vestibular/neurological symptoms and subsequent permanent deficit. Stated differently, the incidence of symptoms may underestimate by a good deal the ultimate identifiable damage done to an organism.
201. MILES, S.
Medical hazards of diving.
In C. N. Davies, P. R. Davis, and F. H. Tyrer (Eds.) The effects of abnormal physical conditions at work. pp. 111-120. Edinburgh: E. & S. Livingstone, Ltd., 1967.
- Of 200 diving accidents (SCUBA) reported, 22 died of asphyxia and of these, two inhaled vomit. "...a situation may occur where

ill-fitting hoods block the ears so that though the middle ear equalizes with the nasopharynx the external meatus may remain at a lower pressure and the drum is drawn outwards (p. 119)." More importantly, perhaps, if the hood has been moved for pressure equalization, some very cold water may be let in. (RK)

202. NICHOLSON, A. N., and J. ERNSTING.
Neurological sequelae of prolonged decompression.
Aerospace Med. 38(4):389-394, 1967.

Concerns altitude decompression.
203. PANOV, A. G., and M. P. ELINSKY.
Stertye formy lorazheniya nervnoi sistemy dekompressionsnoi etiologii u vodoizazov. (Atypical forms of nervous system disorders from decompression in divers.)

204. ROZSAHEGYI, I.
Decompression tables in civil engineering in Hungary.
In R. I. McCallum, (Ed.) Decompression of compressed air workers in civil engineering. pp. 41-45. Proceedings of an international working party held at the Ciba Foundation, London, October, 1965. Newcastle upon Tyne: Oriel Press, 1967a.
205. ROZSAHEGYI, I.
Decompression sickness and the Hungarian schedules.
In R. I. McCallum, (Ed.) Decompression of compressed air workers in civil engineering. pp. 99-113. Proceedings of an international working party held at the Ciba Foundation, London, October, 1965. Newcastle upon Tyne: Oriel Press, 1967b.
206. ROZSAHEGYI, I.
Neurological damage following decompression.
In R. I. McCallum (Ed.) Decompression of compressed air workers in civil engineering. pp. 127-137. Proceedings of an international working party held at the Ciba Foundation, London, October, 1965. Newcastle upon Tyne: Oriel Press, 1967c.

This article is a narrative version of Rozsahegyi and Roth (1966b, #189), with somewhat more speculations, plus a good discussion by symposium participants.
207. WALDER, D. N.
Adaptation to decompression sickness in caisson work.
Biometeorology 2 (pt. 1):350-359, 1967a. N.V.
208. WALDER, D. N.
The effectiveness of the British decompression table.
In R. I. McCallum (Ed.) Decompression of compressed air workers in civil engineering. pp. 65-70. Proceedings of an international working party held at the Ciba Foundation, London, October, 1965. Newcastle upon Tyne: Oriel Press, 1967b. N.V.
209. WALDER, D. N.
Aetiological factors in decompression sickness.
In R. I. McCallum (Ed.) Decompression of compressed air workers in civil engineering. pp. 114-126. Proceedings of an international working party held at the Ciba Foundation, London, October, 1965. Newcastle upon Tyne: Oriel Press, 1967c. N.V.

210. WALDER, D. N.
Decompression sickness in tunnel workers.
In C. M. Davies, P. R. Davis, and F. H. Tyrer (Eds.) The effects of abnormal physical conditions at work. Edinburgh: E. & S. Livingstone, Ltd., 1967d.
- He points out that while <1% of all dives result in accidents, >20% of the divers appear to have necrosis. Perhaps similar relationships can be demonstrated regarding vestibular symptomatology in diving and permanent vestibular/neurological effects. (RK) In addition, he feels that probably everyone experiences DCS, but most don't report it because it isn't manly. Perhaps vertigo, or a similar symptom, could be used to screen persons who may profit by extra decompression time. (RK)

211. BAYLISS, G. J. A.
Aural barotrauma in naval divers.
Arch. Otolaryngol. 88:49-55, 1968.
- This report is mainly of interest as an auditory study. However, the author's speculation (p. 146) regarding selection procedures as a possible influence on the low incidence of vertigo in his population vs. others is important. Shilling and Everley (1942, #57) make a similar point in another context. These factors could result in an underestimation of the problem of vertigo in populations with less vigorous selection procedures.

212. DAVIS, G. D.
A review of skin diving hazards.
Med. J. Aust. 55(6):230-235, 1968. N.V.

Evolution of concepts in the etiology of bends.
Aerospace Med. 39(10):1058-1061, 1968.

A good historical treatment.

215. GILLEN, H. W.
Symptomatology of cerebral gas embolism.
Neurology 18:507-512, 1968.

The author states the symptoms of cerebral gas embolism (dizziness, nausea, and visual disturbances reported in 20% of the cases investigated) is similar to, and should be compared with, reports of vestibular symptoms of DCS.

216. KELLEY, J. S., T. E. BERGHAGE, and J. K. SUMMITT.
Review of diving accident reports, 1967.
U. S. Navy Experimental Diving Unit, Wash., D. C., Research Report 10-68, 1968.

217. LABA, L.
Przypadek choroby kesonowej z zespołem Meniera u Nurka, leczony rekompresją z zastosowaniem tlenu pod ciśnieniem, 3,4 atm. (A case of decompression sickness with Meniere's syndrome, in diver treated by recompression with pure oxygen under 3.4 atm. pressure.)
Bull. Inst. Mar. Med. Gdansk 19:191-195, 1968.

The English summary indicates that dizziness and vomiting occurred, as well as pain in lumbar-sacral region.

218. LAMBERTSEN, C. J.
Modern aspects of treatment of decompression sickness.
Symposium on Undersea-Aerospace Medicine, Miami, Florida, May 9, 1968.
Aerosp. Med. 39(10):1055-1093, 1968.

219. MCCALLUM, R. I.
Decompression sickness: A review.
Br. J. Ind. Med. 25:4-21, 1968.

Table I (pp. 6, 7) shows that type II ranges from 2 to 17% in a review of 13 major caisson works between 1914 and 1966. It appears that type I and type II are mutually exclusive, and the former category is used in preference to the latter. This would underestimate the incidence of type II cases.

220. PARKER, D. E., H. E. VON GIERKE, and M. RESCHKE.
Studies of acoustical stimulation of the vestibular system.
Aerosp. Med. 39(12):1321-1325, 1968.

This study and references in the author's bibliography show that noise can result in vestibular stimulation and should be considered in connection with noise levels in pressure chambers (Murry, 1970, #956).

221. RICCIO, D. C., and J. S. THACH.
Response suppression produced by vestibular stimulation in the rat.
J. Exp. Anal. Behav. 11(4):479-488, 1968.

A "behavioral approach [providing] a sensitive and quantifiable technique for assessing the effects of vestibular stimulation in animals (p. 479)" is described using FR, VR, VI, and FI schedules.

222. U. S. NAVY.
U. S. Naval flight surgeon's manual. Wash., D. C.: U. S. Govt. Printing Office, 1968.

"The danger of pressure vertigo is that it occurs suddenly, may persist for 10 to 60 seconds, and is apt to occur at a critical time in flight when the plane is either gaining or losing altitude rapidly."

223. WALTREGNY, A., M. LAMEY, and J. MAWET.
Surveillance continue electroencephalographique et electrocardiographique de la plongee a l'air en caisson (4 ATA). (Continuous electroencephalographic and electrocardiographic surveillance of submergence in caisson (4 ATA)).
Acta Neurol. Belg. 68:851-861, 1968. N.V.

224. BAYLISS, G. J. A.
Civilian diving deaths in Australia.
J. Forensic Med. 16:39-44, 1969.

The author reports the cause of death in 71 drownings: Decompression sickness was a factor in 9 ("neurological involvement was responsible for most deaths from decompression sickness [pp. 42, 43]"); 30 were cause unknown. Not mentioned but possibly a factor in the cause unknown category is disorientation.

225. BEHNKE, A. R.
New approaches to medical aspects of work in compressed air.
J. Occup. Med. 11:259-272, 1969.

Dizziness and ataxia were reported, in some cases exposed only to 9-16 psi. The author feels that type I DCS should be called "mild (p. 263)" and

type II DCS "serious (p. 264)." He feels also that residual impairment is likely with serious DCS. Other studies are reviewed where the ratio of type I to type II is between 6:1 and 24:1. The importance of the patency of auditory tubes, and auditory acuity as a concern are mentioned (p. 261).

226. BENNETT, P. B.
Hazards of inner space.
Sci. J. pp. 64-69, April, 1969.
- "Sometimes the tremors were accompanied by dizziness, nausea, and even vomiting [to depths between 90 and 240 meters] during the latter part of the exposure or during decompression (p. 66)."
227. BRIERLEY, J. B., and A. N. NICHOLSON.
Neuropathological correlates of neurological impairment following prolonged decompression.
Aerospace Med. 40:148-152, 1969.
- In addition to a report of cerebellar and other CNS pathology this paper contains a useful bibliography. For connection of cerebellum and vestibular system see Wang and Chinn (1956, #361); Brodal, et al. (1962, #383); and Brodal (1966, #427). For bubbles in the cerebellum, see Erdman (1913, #29).

Reflexions sur deux cas de maladie de la decompression (M.D.D.)
In Bulletin Medsubhyp 1, pp. 10-12, French Association for Subaqueous and Hyperbaric Medicine Service, 13 Marseille, December, 1969.
230. GRIFFITHS, P. D.
Clinical manifestations and treatment of decompression sickness in compressed air workers.
In P. B. Bennett and D. H. Elliott (Eds.) The physiology and medicine of diving. pp. 451-463. Baltimore: Williams and Wilkins Co., 1969.
- The author distinguishes between type I (e.g., pain) and type II (e.g., chokes, CNS) symptoms. Claims the latter are more traumatic and appear earlier post-dive. It may follow that: (a) type II could be a useful premonitory sign of type I if workers could be encouraged to be candid; (b) some type II symptoms may appear more benign than type I and the worker may ignore them unless type I symptoms occur, with the result that the incidence of type II symptoms is underestimated.
231. KIDD, D. J., and D. H. ELLIOTT.
Clinical manifestations and treatment of decompression sickness in divers.
In P. B. Bennett and D. H. Elliott (Eds.) The physiology and medicine of diving. pp. 464-490. Baltimore: Williams & Wilkins, 1969.
- A good review of diagnostic classification with data. They consider that 'the staggers' "...is a disturbance of labyrinthine function with vertigo, nystagmus, nausea and vomiting (p. 471)."
232. LANG, J., I. ROZSAHEGYI, and T. TARNOCZY.
Investigations of the hearing loss of caisson-workers.
Proceedings of the III. Conference against noise and vibrations. Bucuresti, 1969. N.V.

235. ADOLFSON, J., K. BJERVER, E. FLUUR, and L. GOLDBERG.
Vestibular reactions during hyperbaric conditions.
Forsvärmedicin (Stockh) 6:234-238, 1970.

The authors found no difference in the vestibular ocular reflex at 10 ata induced by head (relative to neck) displacement--but see Hinoki and Terayama (1966, #431). This study should be repeated with whole body stimulation to minimize cervical inputs, then characteristics of the fast phase and slow phase velocity should be studied (RK), in addition to slow phase displacement. See also Kotaskova (1970, #751).

236. THE ATHLETIC INSTITUTE.

Human performance and scuba diving.

Proceedings of the Symposium on Underwater Physiology, La Jolla, Calif., April 10-11, 1970. Chicago: The Athletic Institute, 1970.

237. BENNETT, P. B., J. MORRISON, J. BEVAN, P. SHARPHOUSE, and J. EATON.
Interim report on some physiological studies during 1500 foot simulated dive.
Royal Naval Physiological Laboratory Report IR 1/70, Alverstoke, England, 1970.

Authors state that during the compression phase: "Rapid movements of the head were followed by a slightly delayed sense of re-orientation (p. 23)." "Decompression. One subject (P.S.) developed symptoms indicating loss of sense of balance including nausea and vomiting, especially whilst the eyes were open (p. 24)." "Lying motionless helped. Decompression was attempted and helped somewhat, but caused syncopal symptoms in the other subject.

238. BUEHMANN, A. A., H. MATTHYS, H. G. OVERPARTH, P. B. BENNETT, D. H. ELLIOTT, and S. P. GRAY.
Saturation exposures at 31 ata in an oxygen-helium atmosphere with excursions to 36 ata.
Aerosp. Med. 41(4):394-402, 1970.

The authors report: in a 2-hour exposure to 31 ata, 2 subjects were symptom free; in a four-hour dive to 31 ata, vertigo, tremor, and tachycardia appeared in one subject and nausea in the other; in a third group of 2 subjects, both had tremor, 1 had tachycardia and the other vertigo and nausea; of 3 subjects exposed to 31 ata with excursions to 36 ata, 1 had nausea and vertigo.

239. CHAP'AN, R. M., C. P. CAVONIUS, and J. T. EPNEST.
Alpha and kappa electroencephalogram activity in eyeless subjects.
Science 171:1159-1161, 1970.

This study questions the results of Lippold (1970, #247) and Mulholland and Evans (1965, #169) regarding eye movements and EEG.

240. DEMARD, F., P. FREDENUCCI, and A. APPAIX.
Traitement hyperbare des surdites brusques et des surdites de l'oreille-interne par barotraumatisme. (Hyperbaric treatment of sudden deafness and of deafness of the inner ear caused by barotrauma.)
In Bulletin Medsubhyp No. 1, French Association for Subaquatic and Hyperbaric Medicine, pp. 13-14. Salvator Hospital, 13 Marseille (9e), December, 1969.

241. EICHEL, B. S., and LANDES, B. S.
Sensorineural hearing loss caused by skin diving.
Arch. Otolaryngol. 92:128-131, 1970.
Of two cases of unilateral hearing loss one person had dizziness and balance problems.
242. ELINSKII, M. P.
Decompression disorders after exposures to a "safe pressure" or a "safe altitude."
Milit. Med. J. 7:87-92, 1970.
Describes some neurological disturbances and provides the translated title of Russian literature appearing within the past twenty years.
243. ENDERS, L. J., and E. RODRIGUEZ-LOPEZ.
Aeromedical consultation service case report: Alternobaric vertigo.
Aerospace Med. 41(2):200-202, 1970.
Claims alternobaric vertigo incidence may be underestimated. Contributing factors and differential diagnoses are discussed.
244. GRAYBIEL, A. (Ed.)
Fourth symposium on the role of the vestibular organs in space exploration.
Naval Aerospace Medical Institute, Pensacola, Fla., September 24-26, 1968.
Report No. NASA SP-187, 1970.
This volume plus Graybiel (1965, #417; 1966, #576; 1967, #450) are the best collection of studies of the vestibular apparatus. See also Camis (1930, #299).
245. KREPS, E. M., et al.
Hyperbaric epilepsy and narcosis.
Joint Publications Research Service, Wash., D. C., JPRS-51714, 4 November 1970.
Several articles which deal with CNS effects (in man and animals) from hyperbaria are contained in this translation.
246. LEHMANN, H. J., K. HELD, and G. WERNER.
Neurologische Folgezustände der Taucherkrankheit. (Neurological conditions resulting from diver's disease. Trans. by Mrs. A. Woke, NMRI, 1972.)
Nervenarzt 41:189-193, 1970.
This study shows that neurological deficits involving the vestibular apparatus and its connections occur in connection with a career in compressed air work (see also Lang, 1971, #278).
247. LIPPOLD, O.
Origin of the alpha rhythm.
Nature 226:616-618, 1970.
Changes in EEG are symptoms of the HPNS syndrome, and this study suggests that eye movements are related to EEG changes. The relationship of eye movements to vestibular stimulation is well known (cf. Robinson, 1968, #595).
248. OVERRATH, G., H. MATTHYS, and A. A. BUILMANN.
Saturation experiment at 31 ata in an oxygen-helium atmosphere.
Helv. Med. Acta 35(3): 180-200, 1970.
Mentions vestibular symptomatology as part of the high pressure nervous system syndrome.

249. PLANTE-LANGCHAMP, G., P. MAESTRACCI, and H. NICOLAI-HARTER.
Deux cas de destruction labyrinthique après plongées.
In Bulletin Medsubhyp No. 4, Edite par la Comex B. P. 143 Mazargues, 13
Marseille, December 1970.

This article describes two instances of labyrinthine damage. In addition, other articles in this Bulletin contain mention of vestibular difficulties.

250. STANC, P. R., and E. L. WIENER.
Diver performance in cold water.
Hum. Factors 12(4):391-399, 1970.

A good bibliography on cold water performance. Data showed also that one of 14 people were nauseated (p. 393)--perhaps due to caloric irrigation of the vestibular system. (RK)

251. U. S. NAVY.
U. S. Navy diving manual.
NAVSHIPS 0994-001-9010. Wash., D. C.: U. S. Govt. Printing Office, 1970.

Very small mention of vestibular functions is made in this publication.

252. VOROSMARTI, J., and M. E. BRADLEY.
Alternobaric vertigo in military divers.
Milit. Med. 135:182-185, 1970.

253. ZAL'TSMAN, G. L.
Initial manifestations of hyperbaric epilepsy in man.
In Giperbaricheskiye epilepsiya i narkos, pp. 155-162. Leningrad: 1968.
Trans. in Kreps, E. M., et al., Hyperbaric epilepsy and narcosis. pp. 26-43.
Wash. D. C.: Joint Publications Research Service, 4 November 1970.

This compilation (90 pp.) contains chapters from a book of about 300 pages. Most of the articles deal with the CNS effects of compressed air and gas mixtures (e.g., helium and argon), are excellent, and will repay careful reading. (RK) Symptoms of the high pressure nervous system syndrome are reported, particularly with regard to performance and EEG changes. Few references to subjective symptoms "heaviness in the head (p. 49)" and "nausea (p. 50)" are mentioned. Reports of "fullness of the head" are reported (cf. e.g., Wendt, 1951, #345), often in connection with motion sickness.

254. ZINKOWSKI, N.
No air and bad air.
Undercurrents pp. 19-23, May 1970.

255. ADOLFSON, J. A.
Inert gas narcosis--A review.
Lecture presented at the Symposium on "Man in the Sea," University of Florida,
Communication Sciences Laboratory, Gainesville, Fla., 29 April 1971.

Some of the symptoms mentioned are, most likely, of vestibular origin. A good bibliography.

256. ALVIS, H. J. (Ed.)
Hazards of valsalva maneuver. (Editor's Note.)
Hyperbaric Medicine Newsletter 7(5):6, 1971.

Describes the hazards of valsalva when used to clear the ears.

257. ANON.
Unique diving mask reduces jaw fatigue.
Oceanol. Int. 6(3):34, 1971.

Announcement of a new mask by General Aquadyne, Inc., to minimize jaw fatigue. (cf. Pinto, 1966, #436; Costen, 1934, #302; Fields, 1958, #117.)

258. ANON.
OPNAV Form 9940/1(4-70) Combined diving log--accident injury report.
10, 19 September 1971.

A case of vertigo is reported.

259. ANON.
Four divers to try for 5,000 foot "dry" dive. (Man in the Sea.)
Oceanol. Int. 11-12 August 1971.

This is a report of the same dive described by Sundmaker (1972, #291) where vestibular problems occurred.

260. ANON.
"Dry" dive to 5,025 feet yields valuable data.
Oceanol. Int. 16-17, September 1971.

Describes the vestibular symptomatology of the University of Pennsylvania Institute for Environmental Medicine dive.

261. BEHNKE, A. R.
Decompression sickness: Advances and interpretations.
Aerosp. Med. 42(3):255-267, 1971a.

An excellent review and modern version of a previous paper by Behnke (1947, #72), but with less discussion of the earlier investigators (e.g., von Schrotter).

262. BEHNKE, A. R.
Personal communication regarding diving physiological decrements (e.g., labyrinthine fluid volume, bone marrow squeeze, and problems of the inner ear). 16 December 1971b.

263. BENNETT, P. B.
Psychological, physiological, and biophysical studies of narcosis.
In C. J. Lambertsen (Ed.) Underwater physiology. pp. 457-469. New York: Academic Press, 1971.

Reporting on the work of others in helium diving, Bennett mentions... "dizziness and nausea during compression (p. 465)."

264. BENNETT, P. B., and E. J. TOWSE.
The high pressure nervous syndrome during a simulated oxygen-helium dive to 1500 feet.
Electroencephalogr. Clin. Neurophysiol. 31:383-393, 1971a.

A good review of the literature precedes a report of "vestibular decompression sickness, resulting in vertigo, nausea, vomiting and photophobia (p. 387)" from 1500 feet in one of two subjects. The remainder of the paper deals mainly with a study of other aspects of the HPNS.

265. BENNETT, P. B., and E. J. TOWSE.
Performance efficiency of men breathing oxygen-helium at depths between 100 feet and 1500 feet.
Aerosp. Med. 42(11):1147-1156, 1971b.

"Dizziness" and "nausea" reported by both divers (p. 1154).

266. BRAUER, R. W., R. O. WAY, M. R. JORDAN, and D. E. PARRISH.
Experimental studies on the high pressure hyperexcitability syndrome
in various mammalian species.
In C. J. Lambertsen (Ed.) Underwater physiology. pp. 487-500. New York:
Academic Press, 1971.

Behavioral measures of vestibular stimulation in animals are difficult to assess (e.g., dizziness, nausea), but perhaps are present in connection with the high pressure hyperexcitability syndrome (see p. 498) as they are in man (cf. Bennett, 1971, #263).

267. BROWN, F. M.
Vertigo due to increased middle ear pressure: Six-year experience of the Aeromedical Consultation Service.
Aerospace Med. 42(9):999-1001, 1971a.

Case histories of alternobaric vertigo are described.

268. CAVE, F. M.
Some comments on a skin-diving death.
Med. J. Aust. 1(15):803-804, 1971.

This paper should be read in conjunction with Fields (1958, p. 537, #117) since the latter offers a mechanism by which the death might be explained. Cave offers a different explanation.

269. CHOUTEAU, J., J. M. OCANA de SENTUARY, and L. PIRONTY.
Theoretical, experimental and comparative study of compression as applied to intervention dives and saturation dives at great depths.
Physiological Studies Report N. 1.71 CEMA, March 25, 1971. (Trans. from French by M. E. M. Hashmall, ONR contract N0014-67-A-0214-0009 with the Biological Sciences Communication Project Medical Center, The George Washington University, Wash. D. C.)

Describes deep dives where symptoms of the high pressure nervous system (HPNS) syndrome have been observed and includes as part of the syndrome "nausea, vertigo... (p. 1)." Considers HPNS resembles neurovegetative symptoms of the vagotonic type (p. 35), and it is known that vagotonic effects tend to adapt, as in motion sickness.

270. COVEY, C. W.
Simulated dives indicated man can work down to 5,000-foot depths.
Undersea Technology 12(9):19-20, 1971.

The vestibular problems of the 1200 foot University of Pennsylvania, Institute for Environmental Medicine dive are reported.

271. DEMARD, F.
Hyperbarie et oxygenotherapie hyperbare en oto-rhino-laryngologie.
Doctoral thesis, 1968. 185 p. (Hyperbaria [life under high pressure] and therapy with oxygen at high pressure in otorhinolaryngology.)
NAVSHIPS Trans. No. 1292, Wash., D. C., June 1971.

The latter portion of this thesis deals with barotrauma. It has an exhaustive bibliography, and case histories and epidemiology are included. Of particular interest is the section on "Barotrauma of the Internal Ear" (p. 211 of the NAVSHIPS Translation).

272. EDMONDS, C.
Vertigo in diving.
Royal Australian Navy School of Underwater Medicine, Balmoral, N. S. W.
2091, Report No. 1/71, 1971.
- An outstanding review article--probably the best single source regarding the medical implications of the vestibular apparatus in compressed air work. A nosology for differential diagnosis of vertigo in diving is offered (p. 7), and this or a similar classification should be adopted. Case histories are included; etiologies and countermeasures are suggested.
273. FRUCTUS, X., and P. FRUCTUS.
Research program on using various gaseous mixtures for very deep dives.
Trans. from French by L. J. Robbins. NAVSHIPS Translation No. 1276, 58.
Dept. of Navy, Wash., D. C., May 1971.
- Vertigo, disorientation, and vomiting mentioned throughout. Additionally, the high pressure nervous system syndrome is described, and symptoms of drowsiness are emphasized. The soporific effect of vestibular stimulation is well known and should be considered.
274. FRUCTUS, X. R., R. W. BRAUER, and R. NAQUET.
Physiological effects observed in the course of simulated deep chamber dives to a maximum of 36.5 atmospheres in a helium-oxygen atmosphere.
In C. J. Lambertsen (Ed.) Underwater physiology. pp. 545-550. New York: Academic Press, 1971.
- Vestibular problems during decompression (p. 546) are mentioned. Also the "somnolence" (p. 547) mentioned may be of similar etiology to "drowsiness" in motion sickness (Graybiel, 1966, #576).
275. HEMPLEMAN, H. V., W. J. EATON, J. M. MORRISON, P. B. BENNETT, and R. N. BARNARD.
Experimental observations on men at pressures between 4 bars (100 ft.) and 47 bars (1500 ft.).
Royal Naval Physiological Laboratory, Alverstoke, England. Report No. 1-71, 1971.
- Vestibular problems reported.
276. JOHNSTON, D. G., and W. D. BURGER.
Injury and disease of scuba and skin divers.
Postgrad. Med. pp. 134-139, April 1971.
- A good section on ear injury.

Comparative motion sickness symptomatology and performance decrements occasioned by hurricane penetrations in C-121, C-130, and P-3 Navy aircraft.
Naval Aerospace Medical Research Laboratory, Pensacola, Fla., NAMRL-1139, July 1971.
278. LANGE, J., I. ROZSAHEGYI, and T. TARNOCZY.
Kochleovestibulare Befunde bei Caissonarbeitern. (Cochleovestibular conditions in caisson workers. Trans. by Mrs. A. Woke, NMRI, 1971.)
Monatsschr. Ohrenheilkd. Laryngorhinol. Reprint 1, 1971.
(Available from Verlag URBAN & SCHWARZENBERG, Kommanditgesellschaft, A-1096, Wien, Frankgasse 4.)
- Shows that residual vestibular problems exist in a population of "432, predominantly under 40, trouble free caisson workers (p. 9)." Refers to a larger report (100 pp.) of the author and contains a few other references to their own work.

279. MCCORMICK, J. G., T. L. HIGGINS, R. M. CLAYTON, and R. W. BRAUER.
Auditory and vestibular effects of helium-oxygen hyperbaric chamber dives
to convulsion depths.
82nd Meeting of the Acoustical Society of America, Denver, Colorado,
19-22 October 1971.

Vestibular post-dive disorders were obtained in guinea pigs similar to vestibular loss found in a previous study of squirrel monkeys.

280. PEGG, J.
Five hundred sixteen ft. (16.6 ATA) five-day ocean saturation dive using a
mobile habitat.
Aerosp. Med. 42(12):1257-1262, 1971.

Vestibular problems (nystagmus and vertigo) in a dive two weeks previous
(p. 1259) did not recur. Some mention of auditory problems.

281. REUTER, S. H.
Medical problems of the sport diver. (Also Editor's note.)
Hyperbaric Medicine Newsletter 7(6):3, 1971.

Reports that "90% of the medical problems of the sport diver are centered around the middle ear (p. 3)."

282. RUBENSTEIN, C. J., and J. K. SUMMITT.
Vestibular derangement in decompression.
In C. J. Lambertsen (Ed.) Underwater physiology. pp. 287-292. New York:
Academic Press, 1971.

Even though a conservative criterion was employed, vestibular derangement incidence appears to be increasing. A very good discussion of possible etiologies is included.

283. SMITH, R. W.
Application of the critical incident technique to accident research in skin
and scuba diving.
Presented at the Human Factors Society Meetings, New York, 1971.

The use of this technique should be explored, particularly if one wishes to establish the base rate of vestibular symptomatology (vertigo, ataxia, etc.).

284. SUMMITT, J. K., and S. D. REIMEPS.
Noise: A hazard to divers and hyperbaric chamber personnel.
Aerosp. Med. 42(11):1173-1177, 1971.

This article reports, among other things, right mandibular numbness. It should be compared with Pinto (1966, #436) and Costen (1934, #302).

285. UDDIN, D. E., T. L. SALLEE, R. E. DANZIGER, E. M. NEPTUNE, J. M. ALEXANDER,

Biochemical studies during saturation diving: Two exposures at 19.2 ATA with
excursions to 23.7 ATA.
Aerosp. Med. 42(7):756-762, 1971.

286. ADOLFSON, J., K. BJERVER, E. FLUUR, and L. GOLDBERG.
Balance disturbances in divers at 10 ATA ambient air pressure.
Manuscript (1970) cited in J. Adolfson, and T. Berghage. Man's sensory processes in the undersea environment. In press.

287. ALVIS, H. J. (Ed.)
Simulated dives to 5,000 feet.
Hyperbaric Medicine Newsletter 8(1):7, 1972a.
- Mentions the vestibular disturbances in the dive conducted at the University of Pennsylvania, Institute for Environmental Medicine.
288. ALVIS, H. J. (Ed.)
Aseptic bone necrosis.
Hyperbaric Medicine Newsletter 8(3):1f, 1972b.
- Reporting on a symposium at USN Submarine Base, New London, it was described that 5 to 20% of compressed air workers have aseptic bone necrosis even though they experience no symptoms and may not have experienced decompression sickness. The possibility exists that vestibular deficits are present in the same way in a diver population. (RK)
289. KENNEDY, R. S., and A. R. FREGLY.
Depressed vestibular function in Navy divers as reflected by caloric irritation thresholds.
In press.
290. KENNEDY, R. S., and J. A. DIACHENKO.
A review of diver vestibular accidents.
In press.
291. SUNDMAKER, W. K. H.
Vestibular function.
Presented at the Special Summary Program-Predictive Studies III, University of Pennsylvania, State College, Pa., 5-7 April 1972.
- Of four men exposed to a simulated depth of 1200 FSW, three experienced several vestibular problems (nausea, dizziness, nystagmus) with residual effects apparent post-dive. The problems did not appear to coincide with changes in pressure. The symptoms were somewhat similar to those of cupulolithiasis (Schuknecht, 1969, #493), although other diagnoses e.g., Costen's syndrome (1934, #302), epidemic vertigo, bubble formation, etc., are possible.

ADDENDUM TO Category I

- 291a. KORNHUBER, H. H.
Neurologie des Kleinhirns. (Neurology of the cerebellum. Trans. and summarized by Mrs. A. Woke, NMRI, 1972.*)
Z. Gesamte Neurol. Psychiat. 191:13, 1968.

The old structure in archi- or vestibulo-, paleo- or spino- and neo- or pontocerebellum is still useful for clinical orientation. Superior- and inferior vermiform processes belong to the spinocerebellum. Both work together to maintain equilibrium and body posture. Lesions produce disturbances in equilibrium. The inferior vermiform process is also connected with position nystagmus. The middle veriform parts, especially folium and tuber, have a special function: apparently they serve the sight motor field. The anatomically found somatotopic struct of the superior vermiform process is clinically relevant--.*

Über eine umschriebene Ansammlung von Otolonien im hinteren hautigen Bogengang.
(A transcribed accumulation of otoconia at the posterior membranous semi-circular canal. Trans. and summarized by Mrs. A. Woke, NMRI, 1972.*)
Monatsschr. Ohrenheilkd. Laryngorhinol. 97:63-68, 1963.

The occurrence of a globular formation at the posterior semicircular canal, near the common pillar is reported. The author found this change in three cases of severe nephrogenous hypertension and in one case of lupus erythematoses. It was found that large masses of otoconia build up this globe, whereby layers of albumin traverse this formation and simultaneously appear to represent the connective mass. The pathogenesis of otoconia migration and masses of albumin is discussed, and the apparently glandular formation at this location of the semicircular canal. This article should be compared with one on cupulolithiasis (Schuknecht, 1969, #493).*

CATEGORY II. CLINICAL INVESTIGATION OF VESTIBULAR SYMPTOMATOLOGY.

1900-1909

On the function of the saccus endolympaticus.
Acta Otolaryngol. (Stockh) 46:285-289, 1956.

Suggests that the function of the saccus is a suction to provide protection within the labyrinth. Pressure changes might perturb function.

361. WANG, S. C., and H. I. CHINN.
Experimental motion sickness in dogs. Importance of labyrinth and vestibular cerebellum.
Am. J. Physiol. 185:617-623, 1956.

The connections of the vestibular system with the cerebellum are reported.

362. DEWITT, G.
Acquired sensitivity to sea sickness after an influenza infection.
Pract. Otorhinolaryngol. (Basel) 19:579-586, 1957.

Perhaps vestibular symptomatology in general is potentiated by illness of flu type. This may be an additional reason not to dive when ill, since decompression sickness type II symptoms often resemble motion sickness symptoms and other similar syndromes have been connected with decompression sickness (e.g., migraine, syncope).

363. TAYLOR, N. B. G., J. HUNTER, and W. H. JOHNSON.
Antidiuresis as a measurement of laboratory-induced motion sickness.
Can. J. Biochem. 35:1017-1027, 1957.

This article shows that a vestibular stimulus (which results in motion sickness) also produces a release of ADH. The antidiuresis which occurs in connection with DCS may also be related to vestibular or vagal stimulation. (RK)

Dive reaction scale study. Project NS185-005 Subtask 5, Test 10.
U. S. Navy Experimental Diving Unit, Wash., D. C. Research Report 5-58,
13 March 1958.
A scale such as this should be re-introduced to diving medicine for many reasons: (a) diagnoses can be made more reliably; (b) saturation diving forms of DCS are less clear cut and probably more serious than previously (see Rubenstein & Summitt, 1971, #282), and a rating scale such as this would be useful; (c) a similar approach would be useful for diagnostic classification of perceptual distortions which occur under water. (RK)

400. NOZUT, M.
Title and article in Japanese.
Otolaryngology (Tokyo) 35:901-907, 1963.
- English Abstract: Observations were made on 51 patients with sudden onset of deafness that was combined with some vestibular disturbances at the Out-patient Department of Otolaryngology at the Tokyo University Medical School Hospital; attentions in these examinations were particularly focused on the types of nystagmuses and the conditions to which the vestibular organs may be disturbed. Directions of the nystagmus varied from simple horizontal to rotatory, direction changing and vertical. From the nature of nystagmus manifested in this way in cases of sudden deafness, the authors believe that, the pathology of this disease is extremely complicated depending upon the degree and the location of the lesion which may be localized in the cochlea or the vestibule; that it may be the influence of some disturbances in the central region particularly the brain stem should also be seriously considered.
401. PHILIPSZOON, A. J., and J. H. BOS.
Neck torsion nystagmus.
Pract. Otorhinolaryngol. (Basel) 25:339-344, 1963.
- Vertigo and nystagmus are generally, but not always, of vestibular origin. Because spinal lesions in DCS can occur, this factor should be considered. (RK)

402. SERRINS, A. J., R. HARRISON, AND J. R. CHANDLER.
Cogan's syndrome. An audiologic evaluation and review of current concepts.
Arch. Otolaryngol. 78:785-789, 1963.

A disease entity where neurological deficits other than those which involve nerve VIII appear absent. The symptoms have some commonalities with studies of otological deficits in caisson workers. (RK)

403. STEARNS, P. E., and C. F. KASPEREK.
Catalog of scientific publications, 1942-Present.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., 31 December 1963.
(Original publication date; updated periodically.)

This catalog of scientific publications contains more citations of studies regarding the vestibular apparatus than any other.

Effects of prolonged caloric stimulation upon oculomotor, vestibulospinal, and segmental spinal activity.
U. S. School of Aviation Medicine, Pensacola, Fla., and National Aeronautics and Space Administration, NSAM-934, NASA Order No. R-93, 24 June 1965.
417. GRAYBIEL, A. (Ed.)
Symposium on The Role of the Vestibular Organs in the Exploration of Space.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. NASA SP-77, January 20-22, 1965.
This volume plus Graybiel (1966, #576; 1967, #450; 1968, #588) are the best collection of studies on the vestibular apparatus. See also Camis (1930, #299).
418. GRAYBIEL, A., R. S. KENNEDY, E. C. KNOBLOCK, F. Z. GUEDRY, JR., W. MERTZ, M. E. MCLEOD, J. K. COLEHOUR, E. F. MILLER, II, and A. R. FREGLY.
Effects of exposure to a rotating environment (10 RPM) on four aviators for a period of twelve days.
Aerospace Med. 36(8):733-754, 1965.
Decreased urinary output in connection with a bizarre vestibular stimulus (p. 742) is reported. Radomski and Bennett (1970a, #504) show increased sodium retention with pressure, and Warwick (1942, #309; 1943, #311) shows that high fluid exchange rates afford some protection from altitude decompression sickness.
419. GUEDRY, F. E.
Psychophysiological studies of vestibular function.
In W. D. Neff (Ed.) Contributions to sensory physiology. Vol. I. pp. 63-135.
New York: Academic Press, 1965.
A very good review paper.
420. MONTANDON, A., P. MONTANDON, G. KAPHAN, and J. LIBOIS.
Nystagmus central et nystagmus peripherique. (English summary.)
Acta Otolaryngol. (Stockh) 59:320-328, Feb.-Apr., 1965.
421. MORRISON, A. R., and O. POMPEIANO.
Vestibular influences on vegetative functions during the rapid eye movement periods of desynchronized sleep.
Experientia 21(11):667-668, 1965.
This paper, and Pompeiano and Morrison (1965, #171) show a relationship between the vestibular nuclei and REM sleep and should be consulted for leads regarding the relationship of their findings to the microsleep reported as a symptom of the High Pressure Nervous [system] Syndrome by Fructus and Fructus (trans. 1971, #273) and Bennett and Towsé (1971a, #264). (RK)

422. PICKARD, B.
Physiology of equilibration.
In W. G. Scott-Brown, J. Ballantyne, ar' J. Groves (Eds.) Diseases of the ear, nose, and throat. Vol. II. Wash., D. C.: Butterworths, 1965a.
423. SCOTT-BROWN, W. G., J. BALLANTYNE, and J. GROVES. (Eds.)
Diseases of the ear, nose and throat. Vol. II.
Wash., D. C.: Butterworths, 1965.
There are many excellent chapters in this book.
424. SIMPSON, J. F.
Meniere's disease.
In W. G. Scott-Brown, J. Ballantyne, and J. Groves (Eds.) Diseases of the ear, nose and throat. Vol. II. p. 737f. Wash., D. C.: Butterworths, 1965.
This excellent chapter reviews the description of the disease by Meniere and indicates that Meniere was planning to relate the disease to certain forms of migraine--also a symptom seen in connection with DCS (see Engel, 1944, #61). Further, the analogy of the disease to glaucoma and too much fluid and the findings in fluid exchange in caisson workers (Adler, 1964, #154; Warwick, 1942, #309; 1943, #311) is interesting.
425. WOLFSON, R. J., D. MEYERS, W. D. SCHLOSSER, and R. A. WINCHESTER.
Vertigo.
Clin. Symp. 17(4):99-133, 1965.
An excellent paper which discusses the provocative clinical tests to use as well as differential diagnoses from the results. Figures are by Netter.
426. WUSTROW, F., and M. WESTHUES-KOELN.
Druckmessungen im perilymphraum des horizontalen bogengangs des menschen bei der rotation. (Pressure measurements in the perilymphspace of the horizontal semicircular canal of man at rotation. Trans. by Mrs. Anna Woke, NMRI.)
Arch. Ohren. Nasen. Kehlkopfheilk. 185:652-655, 1965.
The author shows that pressure changes in the perilymph accompany changes in rotation, therefore, other factors which change pressure in the perilymph could perturb vestibular function.
427. BRODAL, A.
Anatomical aspects of functional organization of the vestibular nuclei.
In A. Graybiel (Ed.) Second symposium on the role of the vestibular organs in space exploration. NAC-NRC Committee on Hearing, Bioacoustics, and Biomechanics, Ames Research Center, Moffett Field, Calif., January 25-27, 1966. NASA SP-115, Wash., D. C., 1966.

Philadelphia: University of Pennsylvania Press, 1968a.
488. WOLFSON, R. J. (Ed.)
The vestibular system and its diseases. (Second printing.)
Philadelphia: University of Pennsylvania Press, 1968b.
A textbook of vestibular function and otoneurology. Many chapters are important sources. "...the program falls naturally into categories...anatomical studies and research; diagnostic methods...; pathophysiology; and therapy. (p. 550)."
489. FREDRICKSON, J. M., H. H. KORNHUBER, and R. L. GOODE.
Nystagmus: Diagnostic significance of recent observations.
Arch. Otolaryngol. 89:88-95, 1969.
A good paper for differential diagnosis.

490. JONGKEES, L. B. W.
Cervical vertigo.
Laryngoscope 79:1473-1483, 1969a.
- The possibility of vertigo resulting from stimuli (e.g., bubbles) in "neck structures (p. 1482)" should be considered. (RK) Jongkees offers probable etiologies (p. 1482). "...nystagmus, homolateral past pointing, and a tendency to fall toward the injected [cervical fissure] side (p. 1474)" can also occur.
491. JONGKEES, L. B. W.
Vestibular physiology and tests.
Arch. Otolaryngol. 89:37-44, 1969b.
492. MCNALLY, W. J.
An evaluation of vestibular testing.
Arch. Otolaryngol. 89:57-63, 1969.
- A very good treatment of the kinds of tests which can be used for diagnosis and positive vestibular function. Many are adaptable for clinical use and expensive, complicated apparatus is not always required. (RK)
493. SCHUKNECHT, H. F.
Cupulolithiasis.
Arch. Otolaryngol. 90:765-778, 1969.
- The symptoms of this disease bear a strong resemblance to those experienced in the deep dive reported by Sundmaker (1972, #291). Perhaps a similar mechanism is involved whereby the effects of pressure cause otocoma (as do other substances with high specific gravity) to accumulate in the ampulla of the posterior semicircular canal. (RK)
494. STEGEMANN, J., and U. TIBES.
Die Veranderung der Herzfrequenz beim Tauchen und atemhalten nach korperlicher anstrengung. (Changes of heart rate during diving and breath-hold after exercise. Trans. by Mrs. Anna Woke, NMRI, 1971.)
Pfleugers Arch. 308:16-24, 1969.
- The vagal influence on diving is discussed.
- 1970-1972
495. BARLOW, J. S.
Vestibular and non-dominant parietal lobe disorders.
Dis. Nerv. Syst. 31:674-679, 1970.
- Describes the relationship of neurological deficits to spatial disorientation. Similar symptoms may occur in connection with compressed air work. (RK)
496. BRUNER, A., and T. W. NORRIS.
Lateralization of hearing loss and vestibular nystagmus in test pilots.
Aerospace Med. 41(6):684-687, 1970.
- Shows that vestibular and auditory deficits are correlated.
497. CLARK, B.
The vestibular system.
Annu. Rev. Psychol. 21:273, 1970.
- A good modern review of vestibular studies. No studies of diving are included.
498. FLUUR, E., and L. MENDEL.
Crescendo time for per-rotatorily elicited nystagmus.
Acta Otolaryngol. (Stockh) 69:239-246, 1970.

499. FLUUR, E., and A. MELLSTROM.
Vestibular bidirectional sensitivity.
Acta Otolaryngol. (Stockh) 69:363-365, 1970.
Shows that "it is not possible to cause a nystagmus in both directions from only one semicircular canal (p. 363)" with galvanic stimulation.
500. FREGLY, A. R., and A. GRAYBIEL.
Labyrinthine defects as shown by ataxia and caloric tests.
Acta Otolaryngol. (Stockh) 69:216-222, 1970.
Shows the validity and reliability (with caloric) of ataxia testing.
501. FRUCTUS, X., and J. C. RICCI.
Reflections on two cases of caisson disease.
Bulletin Mesubhyp No. 1, December 1969. French Association for Subaquatic and Hyperbaric Medicine, Salvator Hospital, 13 Marseille (9e) Trans. from French, NIC Trans. No. 3070, Naval Intelligence Command Hdqtrs., Wash., D. C., 22 June 1970.
Points out the danger of the Valsalva maneuver when resurfacing.
502. ICARASHI, M., B. R. ALFORD, T. WATANABE, and P. M. MAXIAN.
Direction of ataxic gait after unilateral partial destruction of the vestibular system in squirrel monkeys.
Laryngoscope 80(6):896-914, 1970.
Provides validity and diagnostic utility of ataxia tests.
503. MAN, A., and G. LEVENTON.
On vestibular response to mechanical irritation.
Acta Otolaryngol. (Stockh) 69:443-444, 1970.
A negative finding, but of some importance. Should be replicated with a more sensitive indicator like the oculogyral illusion. (RK)
504. RADOMSKI, M. W., and P. B. BENNETT.
Electrolyte changes in humans under hyperbaric conditions.
Aerosp. Med. 41(12):309-313, 1970a.
Sodium and calcium retention are reported in connection with hyperbaric air, but not hyperbaric helium.
505. RADOMSKI, M. W., and P. B. BENNETT.
Metabolic changes in man during short exposure to high pressure.
Aerosp. Med. 41(3):309-313, 1970b.
The authors state the otoliths of the utricle are calcium carbonate concretions. If decreases in calcium excretion can occur with high pressure perhaps increases in calcium deposits within the body can also occur. If so, perhaps these changes might perturb normal vestibular function. (RK)
506. RESCHKE, M. F., and D. E. PARKER.
Stimulation of the vestibular apparatus in the guinea pig by static pressure changes: head and eye movements.
J. Acoust. Soc. Am. 48(4):913-923, 1970.
507. STAHLÉ, J.
Vestibular function on earth and in space.
New York: Pergamon Press, 1970.
A good collection of papers concerning many aspects of vestibular function.

508. TIBBLING, L.
Observations on central mechanisms common to vestibular and optokinetic nystagmus.
Acta Otolaryngol. (Stockh) 69:434-442, 1970.
509. UDO DE HAES, H. A., and H. SCHONE.
Interaction between statolith organs and semicircular canals on apparent vertical and nystagmus.
Acta Otolaryngol. (Stockh) 69:25-31, 1970.
510. WADA, J. A., A. TERAO, H. SCHOLTMAYER, and W. C. TRAPP.
Reversible audiogenic seizure susceptibility induced by hyperbaric oxygenation.
Exp. Neurol. 29:400-404, 1970.
511. ANDERSON, J. R.
Case report of student aviator with unusual psychosomatic symptoms.
Aerosp. Med. 42(11):1212-1218, 1971.

Vestibular symptoms were considered to be precipitated by fear. The application to diving may be direct.
512. ANON.
Carbon monoxide in the Corvair.
Consumer Reports 36(9):572-574, 1971.

The vestibular symptoms reported here are very similar to the "staggers" and other vestibular derangements seen in DCS.
513. BENNETT, P. B., and S. P. GRAY.
Changes in human urine and blood chemistry during a simulated oxygen-helium dive to 1500 ft.
Aerosp. Med. 42(8):868-874, 1971.

Among other changes recorded, it was shown that at 1500 feet there was retention of calcium. Otoliths are calcium carbonate concretions; perhaps there is a connection so that changes in otolith crystallization can occur.
514. BROWN, F. M.
Vertiginous flyer: A review of 6 years' experience of the Aeromedical Consultation Service.
Aerosp. Med. 42(8):891-893, 1971b.

A good epidemiologic study with a citation of 6 cases of alternobaric vertigo.
515. BRUNER, A., and T. W. NORRIS.
Age-related changes in caloric nystagmus.
Acta Otolaryngol. (Stockh) Suppl. 282:1-24, 1971. N.V.
516. GRAYBIEL, A., C. R. SMITH, F. E. GUEDRY, JR., E. F. MILLER, II, A. R. FREGLY, and D. B. CRAMER.
Idiopathic progressive vestibular degeneration in a young man: loss of vestibular servation not the basis for detection.
Naval Aerospace Medical Research Laboratory, Pensacola, Fla., Report NAMRL-1128, March 1971.
517. GUEDRY, F. E., JR., and A. J. BENSON.
Nystagmus and visual performance during sinusoidal stimulation of the vertical semicircular canals.
Naval Aerospace Medical Research Laboratory, Pensacola, Fla., NAMRL Report No. 1131, USAARL Report No. 71-16, 10 March 1971.

Because of the difference between fast phase-up and fast phase-down nystagmus responses, this approach may provide a way of measuring differentially superior vs. inferior canal function by mechanical means.

518. HAWKINS, J. E., JR.
The role of vasoconstriction in noise-induced hearing loss.
Ann. Otol. Rhinol. Laryngol. 80(6):903-1003, 1971.
Shows the influence of oxygen on cochlear function.

Hazards of valsalva maneuver.
Hyperbaric Medicine Newsletter 7(5):6, 1971.
525. MATHOG, R. H., and R. L. CRAMER.
Testing of the vestibular system.
Aerospace Med. 42(7):741-745, 1971.
The title is self explanatory but the article also calls attention to the fact
that cerumen (p. 744) in an ear can modify a caloric response in the laboratory.
This factor should be considered as a possibility in deep-sea diving where
water has access to the ear and if there is a plug of wax in one ear it could
result in a differential stimulus to the semicircular canals. (RK)

530. ROORDA, P.

Der Einflub der Drehung auf den Zeigerversuch von Barany. (The influence of turning on the pointing test of Barany. Trans. by Mrs. A. Woke, NYRI, 1971.) Archives Fur Ohren, Hals-und Kehlkopfheilkunde 113:97-103, 1925.

Describes the effects of a rotatory (i.e., vestibular) stimulus on past pointing.

531. TULLIO, P.

I riflessi sonori.

Amer. J. Physiol. 90:542, 1929. (In Italian. Abstract of communications from International Physiological Congress.)

An early reference to the adequacy of sound serving as a vestibular stimulus. Since pressure chambers can have high noise levels, one should control (or at least be cognizant of) this relationship in provocative vestibular testing performed in the presence of noise. (RK)

1930-1939

532. CATTELL, M.

The physiological effect of pressure.

Biol. Rev. 11:441-476, 1936.

A good source for the preparation of a battery of tests constructed to measure vestibular function (in particular) or CNS functions (in general) at or after pressure. (RK)

533. MOWRER, O.H.

A comparison of the reaction mechanism mediating optokinetic nystagmus in human beings and in pigeons.

Psychol. Monogr. 47(212):294-305, 1936.

Species differences and baseline data are presented. Mechanisms are discussed.

534. WENDT, G. R.

The form of the vestibular eye movement response in man.

Psychol. Monogr. 47:311-328, 1936.

This paper should be consulted if eye movements of suspected vestibular origin during (or pre-post) a dive are to be studied. (RK)

535. DOHLMAN, G.

On the mechanism of transformation into nystagmus on stimulation of the semi-circular canals.

Acta Otolaryngol. (Stockh) 26:425-442, 1938.

Describes the origin of the CNS pathways of the slow phase. The mechanics of the vestibular apparatus are discussed.

1940-1949

536. GRAYBIEL, A. and D. HUPP.

The oculogyral illusion: A form of apparent movement which may be observed following stimulation of the semicircular canals.

J. Aviat. Med. 3:1-12, 1946.

This paper describes a sensitive measure of semicircular canal function. It shows also that illusory responses can occur for angular velocities which could be experienced in a submersible. (RK)

537. GRAYBIEL, A., B. CLARK, and K. MACCORQUODALE.
The illusory perception of movement caused by angular acceleration and by centrifugal force during flight. I. Methodology and preliminary results.
J. Exp. Psychol. 37(2):170-177, 1947.
- "The method is adaptable to a number of types of studies concerned with the influence of angular acceleration and g on visual perception (p. 177)," for example, submersibles. (RK)
538. FENN, W. O., R. GALAMBOS, A. B. OTIS, and H. RAJIN.
Corneoretinal potential in anoxia and ascpnia.
J. Appl. Physiol. 1:710-716, 1949.

Because the gas mixture can influence the standing potential in the eye this factor must be considered when recording vestibular eye movements under pressure and with different gas mixtures. (See Kennedy, 1972, Appendix B, #622, for a bibliographic review.) On the other hand, this measurement may be a useful index of the change. See also Dolatkowski, et al. (1966, #572), and Adolfson, et al. (1970, #235), who recorded eye movements.

False perception of the horizontal and vertical planes in a dynamic setting.
Flying Personnel Research Committee, Farnborough, England, October 1960.
551. CAVAGNA, G., F. SAIBENE, and R. MARGARIA.
A three-directional accelerometer for analyzing body movements.
J. Appl. Physiol. 16:191, 1961.
- A useful paper for building apparatus to measure postural equilibrium either as an indicator of vestibular/CNS symptomatology under pressure, or to measure pre-, post-changes, or to evaluate symptoms. (RK)
552. JONSSON, B., and B. STEEN.
Function of the hip and thigh muscles in Romberg's test and "standing at ease."
An electromyographic study.
Acta Morphol. Neer. Scand. 5(3):269-276, 1962.
- Of interest for testing postural equilibrium during or after a dive. (RK)
553. KENNEDY, R. S., and A. BRAYBIEL.
Validity of tests of canal sickness in predicting susceptibility to airsickness and seasickness.
Aerosp. Med. 33:935-938, 1962a.
- The relationship of caloric responsiveness to motion sickness susceptibility is shown.
554. MCLEOD, M. E., and J. C. MEEK.
A threshold caloric test: results in normal subjects.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., and National Aeronautics and Space Administration, Report No. 72, NASA Order No. R-47, 9 July 1962.
- Threshold responses can occur to as little as 1.5°C either side of body temperature. This could be a source of problems in cold water or gas. (RK)
555. CANTRELL, R. P.
Body balance activity and perception.
Percept. Mot. Skills, 17:431-437, 1963.

556. DAVEY, L. M.
Evaluation of bicaloric test of vestibular function.
U. S. Naval Medical Research Report No. 411, Groton, Conn., 12 September 1963.
- Probably the best normative data published for the caloric test ($N > 400$)--the procedure is well described. Notes regarding differential diagnosis are given. (RK)
557. GUEDRY, F. E., and C. S. HARRIS.
Labyrinthine function related to experiments on the parallel swing.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., BuMed Project MRO05.13-6001 Subtask 1, Report No. 86, 25 September 1963.
- Validation of parallel swing studies by showing normals and persons with labyrinthine defects produce different responses.
558. HARRIS, C. S., R. K. AMBLER, and F. E. GUEDRY.
A brief vestibular disorientation test.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., BuMed Project MRO05.13-6001, Report No. 82, 1 May 1963.
- This test may be useful in selecting persons who are insusceptible to vertigo, or training persons to be more tolerant of vertigo. Transfer of training could occur to vertigo which was induced by pressure, cold water, submersible motion, etc., from that induced mechanically. (RK) This transfer could be in the form of increased physiologic tolerance or improved perceptual awareness.
559. HINOKI, M., and M. KITAHARA.
An application of strain-gage-type instruments to the analysis of the equilibrium function in human subjects and animals.
Acta Otolaryngol. (Stockh) Suppl. 179:110-121, 1963.
- Describes apparatus construction for measuring postural equilibrium.
560. MILLER, E. F., and A. GRAYBIEL.
Role of the otolith organs in the perception of horizontality.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 80, 19 March 1963a.
- A good paper for constructing behavioral tests which measure normal otolith function. (RK)
561. BROWN, J. H., and G. H. CRAMPTON.
Quantification of the human nystagmic response to angular acceleration.
Prediction formulae and nomograph.
Acta Otolaryngol. (Stockh) 58:555-564, 1964.
- A transfer function for semicircular canal function and input is presented.
562. DZENDOLET, E.
Effect of dramamine on the objective electric vestibulogram.
Percept. Mot. Skills 18(2):463-469, 1964.
- Used sway as a provocative test. Showed threshold changed (higher) with drug.
563. GUEDRY, F. E., JR., R. S. KENNEDY, C. S. HARRIS, and A. GRAYBIEL.
Human performance during two weeks in a room rotating at three RPM.
Aerospace Med. 35(11):1071-1082, 1964.
- Describes the results of the use of tests of vestibular function (postural equilibrium, past pointing) before, during, and after bizarre vestibular stimulation.

564. MCLEOD, M. E., and M. J. CORREIA.
Use of caloric test in evaluating the effects of gravity on cupula displacement.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 94, and
NASA, 2 April 1964.
- A technique which can be used in diagnosis and possibly as part of a test battery during compressed air work. (RK)
565. MILLER, E. F., and A. GRAYBIEL.
Magnitude of gravitoinertial force, an independent variable in egocentric visual localization of the horizontal.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 98,
31 July 1964.
- A good paper for study of vertical and horizontal spatial orientation. Many other papers by these authors appear in Stearns and Kasperek (1963, #403).
566. FLUUR, E., L. MENDEL, and L. LAGERSTROM.
Reproducibility of duration of latency time in unidirectional per-rotatory nystagmus.
Acta Otolaryngol. (Stockh) 62:118-124, 1965.
567. FREGLY, A. R., and R. S. KENNEDY.
Comparative effects of prolonged rotation at 10 RPM on postural equilibrium in vestibular normal and vestibular defective human subjects.
Aerospace Med. 36(12):1160-1167, 1965.
- Validity of ataxia testing.
568. PICKARD, B.
Methods of examination of the ear.
In W. G. Scott-Brown, J. Ballantyne, and J. Groves (Eds.) Diseases of the ear, nose, and throat. Vol. II. Wash., D. C.: Butterworths, 1965b.
569. WOLFSON, R. J., W. D. SCHLOSSER, and R. A. WINCHESTER.
Vertigo.
Summit, N.J.: CIBA Pharmaceutical Company, 1965.
- A reissue of Wolfson, et al. (1965, #425).
570. CABARROU, P.
Etude electro-encephalographique de l'ivresse des grandes profondeurs.
Maroc Med. 45:529-536, July 1966b.
571. CRAMPTON, G. H.
Does linear acceleration modify cupular deflection?
From the Second Symposium on The Role of the Vestibular Organ in Space Exploration, Ames Research Center, Moffett Field, Calif., January 1966.
572. DOLATKOWSKI, A., J. TORBUS, K. DEGA, and S. KLAJMAN.
Hibarii Naczas Odruchu Wzrokowo-Wiesiowego u Kurkow. (The influence of hyperbaria on the eye-muscle reflex period in divers.)
Bull. Inst. Mar. Gdansk 17:303-309, 1966.
- The connections of the oculomotor system (III, IV, and VI nerve nuclei) with the vestibular system are well known (cf. Wendt, 1951, #345; Robinson, 1968, #595), and should be considered relative to the findings here of increased eye muscle reflex latency with increased pressure. Of relevance also are changes in eye muscle potential with luminance and with gas mixture (Kennedy, 1972, Appendix B, #622, for review). Since electronystagmography is used in provocative tests of vestibular function, if vestibular tasks are performed at pressure using eye muscle potential as a measure, then the data of Dolatkowski are relevant. (See Fenn, et al., 1949, #538). (RK)

573. ESKIN, A., and D. C. RICCIO.
The effects of vestibular stimulation on spontaneous activity in the rat.
The Psychological Record 16(4):523-527, 1966.
- This study showed that behavioral indications of vestibular stimulation in animals could be reliably obtained. A similar methodology for study of vestibular problems in animals due to decompression could be followed. (RK)
574. FREGLY, A. R., and A. GRAYBIEL.
An ataxia test battery not requiring the use of rails.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 985,
6 December 1966.
- This well standardized test is a good model to follow if one wished to have an entire neurological battery of tests which could be administered prior to entrance into a diving career or even before exposure to a specific environment. It should be considered with other papers by Fregly in this review. (RK)
575. FREGLY, A. R., A. OBERMAN, A. GRAYBIEL, and R. E. MITCHELL.
Thousand aviator study: non vestibular contributions to postural equilibrium functions.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 956,
17 March 1966.
- Correlation of ataxia and other variables (e.g., body build) are shown.
576. GRAYBIEL, A. (Ed.)
Second symposium on the role of the vestibular organs in space exploration.
NAC-NRC Committee on Hearing, Bioacoustics, and Biomechanics, Ames Research Center, Moffett Field, Calif., January 25-27, 1966. NASA SP-115, Washington, D. C., 1966.
- This document and others in the series (I, III & IV) are the modern analogues of a textbook of vestibular functions. (cf. Camis, 1930, #299.)
577. GRIGOR'EV, Y. G., and Y. V. FARBER.
Vestibular function in man during a 120-day period in a hermetically sealed chamber.
Fed. Proc. (Trans. Suppl) 25:966-968, 1966.
- Confinement per se appeared to affect a change in vestibular function. This could be a factor in long-term submergence studies. (RK)
578. NIXON, C. W., C. S. HARRIS, and H. E. von GIERKE.
Rail test to evaluate equilibrium in low-level wideband noise.
Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio, Report No. TR-66-85, July 1966.
- The authors demonstrate the use of this test to measure performance in an exotic environment.
579. GRAYBIEL, A., E. F. MILLER, II, B. D. NEWSOM, and R. S. KENNEDY.
The effect of water immersion on perception of the oculogravic illusion in normal and labyrinthine-defective subjects.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., NAMI-1016, NASA-93, September 1967.
- Individual differences in normals on this test suggest that it might be useful in monitoring vestibular-connected perception during (or pre- post-) compressed air work. It may also be useful as a selection device. (RK)

580. NAPIER, J.
The antiquity of human walking.
Sci. Am. 216(4):56-66, 1967.
- Of some importance for studies of postural equilibrium.
581. NELSON, J. G.
The effect of water immersion and body position upon perception of the gravitational vertical.
U. S. Naval Air Development Center, Johnsville, Pa., Report No. MR-6709,
18 July 1967.
- Because of the difficulties in determining body position under water, perhaps individual performances could be related to success in diving careers, and so used as a selection test. (RK)
582. PEITERSEN, E.
Vestibulospinal reflexes.
Arch. Otolaryngol. 85:192-198, 1967.
- Good references to his earlier work. A simple test for monitoring suspected vestibular involvement as well as for diagnosis post hoc of residual damage.
583. RICCI, D. C., M. ICARASHI, and A. ESKIN.
Modification of vestibular sensitivity in the rat.
Ann. Otol. Rhinol. Laryngol. 76(1):179-188, 1967.
- Because the rat is often the animal of choice in studies of the experimental analysis of behavior, this reference to vestibular responsiveness is included. (RK)
584. BENSEL, C. K., and E. DZENDOLET.
Power spectral density analysis of the standing sway of males.
Perception & Psychophysics 4(5):285-288, 1968.
- Because of "stammers" and increasing body sway at increasing depths (Adolfson, et al., 1970, #235) tests of this type would be useful for monitoring subjects during a dive, as well as for pre- and post-dive (permanent and temporary) changes. (RK)
585. CLARK, B., and J. D. STEWART.
Magnitude estimates of rotational velocity during and following prolonged increasing, constant, and zero angular acceleration.

- 622a. CLARK, B., and M. A. NICHOLSON.
Aviator's vertigo: A cause of pilot error in naval aviation students.
Aviat. Med. 25:171-179, April 1954.
- 622b. MOTTRAM, J., and G. SINGER.
Judgments of body and object verticality in the presence of discordant visual
information.
Psychon. Sci. 22(6):265-367, 1971.

CATEGORY IV. PERCEPTUAL ILLUSIONS OCCASIONED BY THE ENVIRONMENT
SOME OF WHICH MAY BE OF VESTIBULAR ORIGIN.

1910-1919

623. STIGLER, R.

Versuche über die Beteiligung der Schwerkraftempfindung an der Orientierung des Menschen im Raum. (Experiments dealing with the participation of the sensation of gravity in the orientation of man in space. Trans. by Mrs. A. Woke, NTRI, 1972.)

Archiv. für die gesamte Physiologie 148:573-584, 1912.

An early paper which describes the existence of a "special spatial sense organ (p. 575)" which the author studied under water. He used the best swimmers of the Vienna Row Club "DONAU" as subjects (p. 575). He dipped the subjects under water and rotated them for 1 to 1 1/2 minutes, then had Ss indicate which way was up. Gross errors were made, and the subjects were frightened. These data differed from those reported by Exner, therefore, additional tests were made with subjects under water for longer periods, strapped to a board rotating vertically or as a spit. The Ss (Hungarian divers) were able to respond to the upright correctly, although accuracy was not perfect. Mentions also that fear and apprehension contributed to errors. (PK)

1920-1929

624. KOCH, H. L., and J. UFKESS.

A comparative study of stylus maze learning by blind and seeing subjects.
J. Exp. Psychol. 9:118-131, 1926.

Stylus maze performance is generally poorer in blind than blindfolded subjects, although having "some visual experience before the onset of blindness" helps. Similar relationships may be applicable under water. (PK)

625. WEBER, C. O., and K. M. DALLENBACH.

The properties of space in kinaesthetic fields of force.
Am. J. Psychol. 41:95-105, 1929.

1930-1939

626. MACCURDY, J. T.

Disorientation and vertigo, with special reference to aviation.

The introductory contribution to a discussion of disorientation and vertigo at the joint meeting of the Physiological and Psychological Sections of the British Association for the Advancement of Science, Leicester, England, 1933.

627. GIBSON, J. J., and O. H. OWNER.

Determinants of the perceived vertical and horizontal.
Psychol. Rev. 45:300-323, 1938.

An excellent early reference on the perception of the upright with complete bibliography.

1940-1949

628. GRAYBIEL, A., and B. CLARK.

The autokinetic illusion and its significance in night flying.

U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 3, Project X-148(AV-V4-3), 7 February 1945.

A significant paper which reviews visual effects which occur in unarticulated visual environments. The thrust of the paper is aviation, but diving environments have much commonality. (PK)

629. VINACKE, W. E.
The concept of aviator's "vertigo."
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 7, 8 May 1946a.
630. VINACKE, W. E.
Illusions experienced by aircraft pilots.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 9, 31 May 1946b.
631. VINACKE, W. E.
Predicting the susceptibility of aviators to "vertigo". A preliminary study.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 10,
21 June 1946c.
632. VINACKE, W. E.
"Vertigo" as experienced by naval aviators.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 12, 3 July 1946d.

This and other papers by the author report a questionnaire approach that could well
be modified for underwater studies of vertigo. (RK)
633. VINACKE, W. E.
"Fascination" in flight.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 13, 1946e.
634. CLARK, B., and A. GRAYBIEL.
The effect of angular acceleration on sound localization: the audiogyrus illusion.
J. Psychol. 28:235-244, 1949a.

Under certain conditions this effect can lead to disorientation; particularly
when using sound localization for navigation. (RK)
635. CLARK, B., and A. GRAYBIEL.
Studies of human adaptation to centrifugal force. I. Visual perception of the
horizontal.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Research Report No.
NM 001.059.01.22, November 15, 1949b.

Indicates that the vestibular system is useful in orientation but also describes
an illusion (oculogravie) which could occur in submersibles and lead to
disorientation. (RK)
636. WITKIN, H. A.
Perception of body position and of the position of the visual field.
Psychol. Monogr. 73(7):302, 1949.

A good source for studies of perception of the upright under water.

1950-1959

637. PASSEY, G. E.
The perception of the vertical: IX. Adjustment of the visual vertical from
various magnitudes of body tilt.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Joint Project Report
No. 15, NM 001 063.01.15 (formerly NM 001 037), March 10, 1950.

This whole series of studies is of importance for underwater perception. About
thirty studies from these two authors have appeared. See Stearns and Kasperek
(1963, #403) for additional titles.
638. MANN, C. W., and G. E. PASSEY.
The perception of the vertical: V. Adjustment to the postural vertical as a
function of the magnitude of postural tilt and duration of exposure.
J. Exp. Psychol. 41:108-113, 1951.

Shows influence of tilt on perception of upright.

639. GIBSON, J. J.
The relation between visual and postural determinants of the phenomenal vertical.
Psychol. Rev. 59:370-375, 1952.
640. BITTERMAN, D. E., and P. WORCHEL.
The phenomenal vertical and horizontal in blind and sighted subjects.
Am. J. Psychol. 66:598-602, 1953.
Shows the dependence of vision in orientation but also shows that blindfolded sighted subjects are more disrupted than blind subjects when they are tilted.
641. CLARK, B., and A. GRAYBIEL.
"Fascination": A cause of pilot error.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No.
NM 001.059.01.35, 15 May 1953.
The similarities of a pilot flying into a target/tow banner (which occur with some frequency in aviation training) and "perceptual narrowing in novice divers" (Weltman & Egstrom, 1966, #705) are strong enough to suspect a similar mechanism. (RK) This study used over 500 subjects.
642. WITKIN, H. A., H. B. LEWIS, M. HERTZMAN, K. MACHOVER, P. B. MEISSNER, and S. WAPNER.
Personality through perception. New York: Harper, 1954.
This and Witkin (1949, #636) and Witkin et al. (1962, #674), report individual differences in perception of the upright which may have important applications for diver selection and training. (RK)
643. ASHER, H. M.
Off effect giving rise to a sensation of blackness.
J. Physiol. 134:18, 1956.
Demonstrates that "perceptual narrowing" or "tunnel vision" can be of neural origin and can occur when a person stares fixedly. This could also occur if attention is fixed. (RK) (cf. Weltman & Egstrom, 1966, #705.)
644. CLARK, B., and A. GRAYBIEL.
Vertigo as a cause of pilot error in jet aircraft.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 44,
15 August 1956.
This paper should also be consulted because of the possibility of vertigo in submersibles. (RK) Additionally, it describes a useful technique for questionnaire construction which could be used to study vertigo as symptomatology of DCS. (RK)
645. FEENY, B.
Buffalo divers use underwater sled.
Skin Diver 5-21, Sept. 1956. N.V.
646. MANN, C. W.
Final Technical Report, Joint Project Report No. 43.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., 30 June 1956.
The report lists all 43 studies in this series, many of which deal with orientation to vertical and horizontal.
647. CLARK, B., and A. GRAYBIEL.
The break-off phenomenon.
J. Aviat. Med. 28:121-126, 1957a.
Divers should be interviewed to determine whether a similar phenomenon also occurs at depth. (RK)

648. CLARK, B., and A. GRAYBIEL.
Vertigo as a cause of pilot error in jet aircraft.
J. Aviat. Med. 28:469-478, 1957b.
See Clark and Graybiel (1956, #644) for a more complete explanation of questionnaire construction.
649. KOHL, O. A., and F. SEARLE, JR.
Subjective and articulation tests of deep and shallow water divers communication.
U. S. Navy Experimental Diving Unit, Wash., D. C. Report on Project NS185-005,
Subtask 2, Test 10, 19 August 1957.
Because underwater sound communication is poor, perhaps vestibular and/or cutaneous communication should be explored. (RK)
650. WOELLNER, R. C.
The perception of vertical in the presence of increased accelerative forces.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 45,
31 October 1957.
651. MARGARIA, R.
Wide range investigations of acceleration in man and animals.
J. Aviat. Med. 29(12):855-871, 1958.
This is a significant paper--not often referenced in the compressed air literature (probably because it was intended to apply to aviation and space flight). (PK)
It contains information of interest in several categories, e.g., (a) sense of position under water (p. 860), and (b) evoked cerebellar responses have lower thresholds in migratory than non-migratory birds (p. 863 ff).
652. MARGARIA, R., T. GUALTIEROTTI, and D. SPINELLI.
Protection against acceleration forces in animals by immersion in water.
J. Aviat. Med. 29(6):433-437, 1958.
See also Margaria (1958, #651).
653. MELVILL JONES, G.
Disorientation in flight.
Presented at the First International Congress of Aeronautical Sciences, Madrid,
Spain, 8-13 September, 1958.
A good discussion of the problem relative to aviation, and applicable to diving.
654. NUTTALL, J. B.
The problem of spatial disorientation.
J. A. M. A. 166(5):431-438, 1958.
There are many similarities between diving and aviation. Because of a relatively larger research effort in the latter, important leads for the former can often be found. This paper and others deal with disorientation (e.g., Melville Jones, 1957, #112; 1958, #653; and Lundgren, 1965, #166; 1966, #184).
655. PIRENNE, M. H., H. C. MARRIOTT, and E. F. O'DOHERTY.
Individual differences in night-vision efficiency.
Medical Research Council, Special Report Series No. 294, London: Her Majesty's Stationery Office, 1958.
Offers a neural explanation for an effect similar to "percentual narrowing" (Weltman & Egstrom, 1966, #705).
656. BECKMANN, E. L.
Escape from ditched aircraft.
Institute of Aviation Medicine, R. A. F., Farnborough, England, 1959. N.V.

657. PAIDEN, D. A.
Ability of deaf swimmers to orient themselves when submerged in water.
Res. Q. Am. Assoc. Health Phys. Educ. 30:214-226, 1959.

Clearly shows the importance of vestibular organs for orientation underwater. In addition, since individual differences are reported, tests of this orientation ability in normal individuals could be employed as a selection device for diving training. (RK)

1960-1969

658. CLARK, B., and A. GRAYBIEL.
Visual perception of the horizontal during prolonged exposure to radial acceleration on a centrifuge.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., Report No. 54, 18 August 1960.

Same as Clark and Graybiel (1957, #647).

659. GRAYBIEL, A., B. CLARK, and J. J. ZAPRIELLO.
Observations on human subjects living in a "slow rotation room" for periods of two days.
A. M. A. Arch. Neurol. 3:55-73, 1960.

Findings of dizziness, etc., at low rates of angular velocity (1 & 2 RPM) suggest this may be an area of concern in submersibles if the latter turn at comparable rates. (RK)

660. SCHOCK, G. J. D.
Perception of the horizontal and vertical in simulated subgravity conditions.
U. S. Armed Forces Med. J. 2(7):786-793, 1960.

Most of this paper contains raw data. The purpose of the study was connected with space flight; however, the tests were carried out underwater.

661. WHITESIDE, T. C. D.
The effect of weightlessness on some postural mechanism.
Aerospace Med. 31:324, 1960.

The author describes past pointing errors in zero gravity. Neutral buoyancy may produce similar problems. (RK)

662. BROWN, J. L.
Orientation to the vertical during water immersion.
U. S. Naval Medical Research Laboratory, Groton, Conn., Report No. 355, 10 May 1961.

This very significant study shows that orientation underwater is sometimes very poor. It contains suggestions for improvement of perception, and further research needed.

663. CHAMBERS, R. M., D. A. MORWAY, E. L. BECKMAN, R. DEFOREST, and K. R. COBURN.
The effects of water immersion on performance proficiency.
U. S. Naval Air Development Center, Johnsville, Pa., Report No. MA-6133, 1961.

664. GRAVELINE, D. E., B. BALKE, R. E. MCKENZIE, and B. HARTMAN.
Psychobiologic effects of water-immersion-induced hypodynamics.
Aerospace Med. 32:387-400, 1961.

Mainly shows cardiovascular effects, but a good source for other water immersion studies. (RK)

665. GRAYBIEL, A., and CLARK, B.
Perception of the horizontal or vertical with head upright, on the side, and inverted under static conditions and during exposure to centripetal force.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., and National Aeronautics and Space Administration, NASA Order No. R-1, 15 August 1961a.
666. GRAYBIEL, A., and B. CLARK.
Symptoms resulting from prolonged immersion in water: The problem of zero G asthenia.
Aerospace Med. 32(3):181-196, 1961b.
Describes some psychological effects from enforced prolonged water immersion.
667. GUEDRY, F. E., JR., and E. K. MONTAGUE.
Quantitative evaluation of the vestibular Coriolis reaction.
Aerospace Med. 32:487-500, 1961.
Of importance if the angular velocity of submersibles reaches threshold values.
668. BLEGVAD, B.
Caloric vestibular reaction in unconscious patients.
Arch. Otolaryngol. 75:506-514, 1962.
Suggests that arousal can potentiate the caloric vestibular reaction and so a diver in panic may be more susceptible to caloric induced vertigo. Also shows the diagnostic use of the test. (RK)
669. CORSO, J. F.
Bodily position and auditory thresholds.
Percept. Mot. Skills 14:499-507, 1962. N.V.
670. DAVSON, H. (Ed.)
The eye.
New York & London: Academic Press, 1962.
The Troxler phenomenon is described, which is behaviorally similar to "greying out," "tunnel vision," or "perceptual narrowing," and occurs when one gazes fixedly (cf. Weltman & Egstrom, 1966, #705).
671. HAIDER, L. R.
Perception of the visual vertical under reduced gravity.
Aerospace Medical Division, 6570th Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio. Report No. MRL-TDR-62-55, May 1962.
A good review paper with some reference to mutual buoyancy studies.
672. KENNEDY, R. S., and A. GRAYBIEL.
Symptomatology during prolonged exposure in a constantly rotating environment at a velocity of one revolution per minute.
Aerospace Med. 33:817-825, 1962b.
Shows that disorientation and motion sickness are minimal or absent at this angular velocity except for extremely susceptible persons. Perhaps submersibles should use this as an upper limit unless countermeasures are employed. (RK)
673. PIRENNE, M. H.
Light-adaptation.
In H. Davson (Ed.) The eye. Vol. 2. New York: Academic Press, 1962.
The Troxler phenomenon reported here has much in common with "perceptual narrowing" (Weltman & Egstrom, 1966, #705).

674. WITKIN, H. A., R. B. DYK, H. F. PATERSON, D. R. GOODENOUGH, and S. A. KAPP.
Psychological differentiation: Studies of development.
New York: Wiley, 1962.
See Witkin et al. (1954, #642), and Witkin (1949, #636).
675. ANON.
Handbook of instructions for aerospace systems design. Vol. III. Reduced gravity.
AFSOM 80-9, HDQTRS AFSC, Andrews AFB, Wash., D. C., September 1963.
Many studies are reported where water immersion was used to simulate zero gravity. These studies are also of interest for their application to underwater studies, but are not often referenced in underwater reviews. (TK) They include studies of perceptual, cardiovascular, and performance problems.
676. CHAMBERS, R. M.
Psychological problems in disorientation.
U. S. Naval Air Development Center, Johnsville, Pa., NADC-MA-6321, AD 432968,
31 December 1963.
A good review paper with well-described mechanisms and nomenclature.
677. FERCUSON, J. C., and R. M. CHAMBERS.
Psychological aspects of water immersion studies.
U. S. Naval Air Development Center, Johnsville, Pa., Report No. MA-6328,
30 December 1963.
Shows 'a considerable disorientation in the water, especially in the head down and back position (p. iii)." These studies were concerned with effects of weightlessness in space flight but many used water immersion to simulate subgravity and as such have application for underwater physiology and psychology. (TK)
678. MILLER, E. F., and A. GRAYBIEL.
Rotary autokinesis and displacement of the visual horizontal associated with head (body) position.
Aerosp. Med. 34(10):915-919, 1963b.
Shows that past pointing is in error underwater, but adapts.
679. MORWAY, D. A., R. G. LATHROP, R. M. CHAMBERS, and L. HITCHCOCK.
The effects of prolonged water immersion on the ability of human subjects to make position and force estimates.
U. S. Naval Air Development Center, Johnsville, Pa., Report No. MA-6115, 24 July 1963.
Shows that past pointing is in error underwater, but adapts.
680. WHITESIDE, T. C. D., A. GRAYBIEL, and J. I. NIVEN.
Visual illusions of movement.
U. S. Naval School of Aviation Medicine, Pensacola, Fla., and National Aeronautics and Space Administration, NSAM-877, NASA R-93, 21 October 1963.
A review paper which also speculates on mechanisms and implications.
681. BAUERMEISTER, M.
Effect of body tilt on apparent verticality, apparent body position, and their relation.
J. Exp. Psychol. 67(2):142-147, 1964.
682. FLETCHER, J. L., G. D. ROBERSON, and M. LOEB.
Effects of high intensity impulse noise and rapid changes in pressure upon stapedectomy monkeys.
U. S. Army Medical Research Laboratory, Fort Knox, Ky., Report No. 610, August 21, 1964.

683. GUEDRY, F. E., JR., R. S. KENNEDY, C. S. HARRIS, and A. GRAYBIEL.
Human performance during two weeks in a room rotating at three RPM.
Aerosp. Med. 35(11):1071-1082, 1964.
- This report shows that some difficulties exist with an angular velocity as low as 3 RPM and should be considered in connection with submersibles. (Same as #563, Category III.)
684. KATZ, M. S., W. METLAY, and P. A. CIRINCIONE.
The effects of stimulus and field size on the accuracy of orientation in the homogeneous environment.
Communications Psychology Division, Human Factors Laboratory, Orlando, Fla.,
NAVTRADEVVCEN IH-13, AD 607739, July 1964.
- See Metlay, et al. (1964, #685).
685. METLAY, W., M. S. KATZ, P. A. CIRINCIONE, and G. C. TOLHURST.
Vertical orientation in a homogeneous environment.
U. S. Naval Training Device Center, Port Washington, N. Y., NAVTRADEVVCEN IH-19,
AD 603568, 12 October 1964.
- Empty or near-empty fields are experienced by divers.
686. SCHONE, H.
On the role of gravity in human spatial orientation.
Aerosp. Med. 35(8):764-772, 1964.
687. SZIKLAI, C., S. WAPNER, J. H. MCPARLAND, and H. WERNER.
Effect of tonus changes on perceived location of visual stimuli.
Aerosp. Med. 35(6):519-523, 1964.
- Interaction of postural and visual systems is reported.
688. AVANT, L. L.
Vision in the Ganzfeld.
Psychol. Bull. 64(1):246-258, 1965.
- Empty or near empty fields are experienced by divers.
689. MACKWORTH, N. H.
Visual noise causes tunnel vision.
Psychon. Sci. 3:67-68, 1965.
- This paper is relevant to any study where amorphous visual environments exist. It is particularly relevant to the "perceptual narrowing" finding (Weltman & Egstrom, 1966, #705).
690. PROPT, A. S.
A preliminary study of man in the sea, diver personnel and training implications.
Naval Personnel Program Support Activity, Personnel Research Laboratory, Wash.,
D. C., Report No. WR-1 66-5, July 1965.
- Describes a "depth disorientation phenomenon" (pp. 18, 19, and 22) in connection with Sealab II.
691. STEPHENS, W. M.
Research submarines.
Sea Frontiers 11:228-241, July/Aug. 1965. N.V.

692. STEWART, J. D., and B. CLARK.
Coriolis effects during pitch and roll maneuvers in a piloted flight simulator.
Aerosp. Med. 36(2):106-112, 1965.
- Applicable to submersibles.
693. WYKE, M.
Comparative analysis of proprioception in left and right arms.
Q. J. Exp. Psychol. 17(2):149-157, 1965.
- Pointing accuracy a function of target position and head movement. The influence of neutral buoyancy on these results should also be studied. (RK)
694. CONTICELLI, M., and E. M. GLORIA.
Visual performance in the empty field and in partially structured fields. III.
Task involving Vernier acuity.
Atti Fond. G. Ronchi 21(3):603-614, 1966.
- See Conticelli and Zoli (1966, #695).
695. CONTICELLI, M., and M. T. ZOLI.
Visual operating characteristic in the empty field.
Atti Fond. G. Ronchi 21(3):307-314, 1966.
- Visibility underwater can be analogous to an empty field.
696. DAY, R. H., and N. J. WADE.
Visual spatial aftereffect from prolonged head-tilt.
Science 154(3735):1201-1202, 1966.
697. DOWD, P. J., E. W. MOORE, and R. L. CRAMER.
Effects of flying experience on the vestibular system: A comparison between
pilots and non-pilots to Coriolis stimulation.
Aerosp. Med. 37(1):45-47, 1966.
- The differences in susceptibility to Coriolis stimulation between experienced
and inexperienced aviation personnel may be applied to submersible training
and selection of divers. (RK)
698. HOWARD, I. P., and W. B. TEMPLETON.
Human spatial orientation.
New York: John Wiley & Sons, 1966.
- An excellent text which describes the interrelationships of vestibular and visual
stimulations. Tests of vestibular function are included. The chapter on
orientation (p. 419 ff.) on weightlessness is particularly relevant for diving
medicine.
699. MARGARIA, R.
Human locomotion on the earth and in subgravity.
Schweizerische Zeitschrift fur Sportmedizin 14:159-167, 1966.
- See other papers by Margaria.
700. MILLER, E. F., and A. GRAYBIEL.
Magnitude of gravitoinertial force, an independent variable in egocentric visual
localization of the horizontal.
J. Exp. Psychol. 71(3):452-460, 1966a.

701. MILLER, E. F., and A. GRAYBIEL.
Role of the otolith organs in the perception of horizontality.
Am. J. Psychol. 79:24-37, 1966b.
- This paper and others by these authors should be consulted for the mechanism of orientation to the vertical and horizontal in humans, as well as for an understanding of the disorientation problems which may occur in this capacity under neutral buoyancy. (RK)
702. MILLER, E. F., A. R. FREGLY, and A. GRAYBIEL.
Visual horizontal perception in relation to otolith function.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 989,
23 December 1966.
703. MOORE, E. W.
Responses to Coriolis stimulation in flying personnel with different levels of proficiency.
USAF School of Aerospace Medicine, Brooks AFB, Texas, SAM-TR-66-36, AD 634406,
April 1966.
- The author reports increased tolerance with flying experience and similar effects may occur in similar environments (e.g., submersibles). Flying experience was correlated with age, and although not mentioned as such, may also have been a factor. (RK)
704. WEENE, P., and R. HELD.
Changes in perceived size of angle as a function of orientation in the frontal plane.
J. Exp. Psychol. 71(1):55-59, 1966.
705. WELTMAN, G., and G. H. EGSTROM.
Perceptual narrowing in novice divers.
Hum. Factors 499-506, December 1966.
- These effects can influence orientation whether to the upright or in terms of a direction sense. (RK)
706. ARNOLD, H. A.
Manned submersibles for research.
Science 158(3779):84-95, 1967.
- The addition of motion to the other attributes of the underwater sensory environment may increase the perceptual problems.
707. CLARK, B., and A. GRAYBIEL.
The egocentric localization of the visual horizontal in normal and labyrinthine-defective observers as a function of head and body tilt.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 991,
17 January 1967a.
- Shows the importance of the vestibular system in orientation (as in Clark & Graybiel, 1967b, #708).
708. CLARK, B., and A. GRAYBIEL.
Egocentric visual localization in normals and partially blind during a change in direction of gravitoinertial force.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 1006,
2 May 1967b. Also in Am. J. Psychol. 81:314-318, 1968.
- Shows the importance of the vestibular system in orientation.

709. GRAYBIEL, A. (Ed.)
Third symposium on the role of the vestibular organs in space exploration.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., NASA SP-152, 24-26
January 1967.

This volume, plus Graybiel (1965, #417; 1967, #450; 1968, #588), are the best collection of studies of the vestibular apparatus. See also Camis (1930, #299). (RK)

710. GRAYBIEL, A., E. F. MILLER, II, B. D. NEWSOM, and R. S. KENNEDY.
The effect of water immersion on perception of the oculogravic illusion in normal and labyrinthine-defective subjects.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 1016, September 1967.

One "normal" subject had more difficulty in orientation underwater than did the other three. (Same as #579.)

711. GUEDRY, F. E., JR.
Relations between vestibular nystagmus and visual performance.
U. S. Army Aeromedical Research Unit, and U. S. Naval Aerospace Medical Institute, Pensacola, Fla., NAMI-1008, 24 May 1967.

Nystagmus elicited by rotation degrades visual performance. It is felt that if vertigo and nystagmus occur in divers from pressure, bubbles or other means, a similar outcome can be expected. (RK)

712. PESCH, A., and R. TOHER.
Analysis of star boat performance and characteristic response.
General Dynamics Electric Boat Division, Groton, Conn., P417-67-060, October 30, 1967.

Figures 18, 19, and 20 suggest that in a 30-second 180° turn, the angular velocity in the last 10 seconds approaches the threshold for Coriolis stimulation of the semicircular canals (Meda, 1952, #92) which could in turn produce vertigo. (RK)

713. STEEDMAN, W. C.
Absolute judgments of size in a restricted visual environment.
Percept. Mot. Skills 24:731-736, 1967.

714. ANON.
Rotational extravagance.
Approach 14-15, June 1968.

Describes how fear, information overload, and a vestibular stimulus can summate and interact with hazardous consequences.

715. ANON.
Research submersibles; A report from General Dynamics.
Undersea Technol. 9:77, May 1968. N.V.

716. BARNETT, F.
The epidemiology of USAF spatial disorientation aircraft accidents.
Presented at the 1971 Aerospace Medical Association Meeting in Houston, Texas, 1 January 1958-1 December 1968.

Although present-generation submersibles do not approach the aerobatic freedom of high performance aircraft, this report suggests that a violent maneuver is not always necessary for disorientation. Leads and potential problem areas for underwater vehicles can be found here. (RK)

717. CLARK, B., and J. D. STEWART.
Comparison of sensitivity for the perception of bodily rotation and the oculogyral illusion.
Perception and Psychophysics 3(4A):253-256, 1968b.
- The fact that two indicators of rotation sensitivity have different thresholds can result in disorientation in moving vehicles, particularly when cues are altered or absent (e.g., underwater). (RK)
718. HARRIS, C. S., and H. C. SOTMER.
Human equilibrium during acoustic stimulation by discrete frequencies.
Aerospace Medical Research Laboratories, Wright-Patterson AFB, Ohio, Report No. AFRL-TR-68-7, May 1968.
- Because noise can produce changes in equilibrium, and because pressure chambers are noisy, one must control the effects of noise in order to measure the effects of pressure on equilibrium. (RK)
719. IWANE, M., M. ONO, and M. SAWADA.
Effects of Coriolis stimulus during mild centrifugal G-load upon stick performance.
Med. Experiment Report 8(4):135-141, 1968. (Trans. by Civilian Aeromedical Institute Library, AC-922, Federal Aviation Administration, Oklahoma City, Okla., 1969.)
- This paper shows that head movements incident to angular velocity (not very different from the rate of turn in submersibles--RK) can influence tracking.
720. LETKO, W., and A. A. SPADY, JR.
Walking in simulated lunar gravity.
Presented at the Fourth Symposium on the Role of the Vestibular Organs in Space Exploration, Pensacola, Fla., September 24-26, 1968.
721. MILTICH, A. J.
Human auditory threshold shifts following changes between upright, supine and inverted bodily positions.
J. Auditory Res. 8:367-377, 1968.
- Auditory thresholds are higher in the inverted position--a position not uncommon in diving. The influence of the vestibular system was not ruled out satisfactorily. (RK)
722. NELSON, J. G.
Effect of water immersion and body position upon perception of the gravitational vertical.
Aerosp. Med. 39(8):806-811, 1968.
- Demonstrates the difficulties in orientation to which way is up when immersed in water. A good bibliography.
723. PESCH, A. J.
Human factors research and simulation in the design of small submersibles.
General Dynamics Electric Boat Division, Groton, Conn., May 7, 1968.
- See Pesch and Toher (1967, #712).
724. RADLOFF, R., and R. HELMREICH.
Marine life.
In R. Radloff and R. Helmreich Groups under stress: Psychological research in SEALAB II. Century Psychology Series. New York: Appleton-Century-Crofts, 1968.
- Reports on disorientation in SEALAB II, pp. 62, 63.

725. ROSS, H. E., and P. LENNIE.
Visual stability during bodily movement underwater.
Underwater Association Report 504:55-57, 1968.
726. ANON.
Copter 1 submersible.
Oceanol. Int. 4:14, Jan./Feb. 1969. N.V.
727. ANON.
Sub-surface ocean vehicle.
Oceanol. Int. 4:26, May/June 1969. N.V.
728. BARRETT, G. V., P. A. CABE, C. L. THORNTON, and H. E. KERBER.
Evaluation of a motion simulator not requiring cockpit motion.
Hum. Factors 11(3):239-244, 1969.

Because motion sickness and vertigo might occur in submersibles, and on barges before a dive with dire consequences, a training or screening device may be useful for diving medicine. (RK)
729. BROSGOLE, L., and K. H. HANSEN.
The effect of change in body orientation upon the perceived direction of autokinesis.
Psychon. Sci. 15(4):204, 1969.

Because a swimmer's attitude underwater with respect to gravity is different than when under terrestrial conditions, this paper is of interest. (RK)
730. BYNUM, J. A., and J. A. STEPN.
Painted helicopter main rotor blades and flicker-induced vertigo.
Aerospace Med. 40(6):622-626, 1969.

The authors indicate that under special conditions "vertigo" can be induced by flicker.
731. CONTICELLI, M., and R. BRANCATO.
Autokinesis in the empty field.
Atti Fond. G. Ronchi 24(3):375-386, 1969.

See Conticelli and Zoli (1966, #695).
732. DOTY, R. L.
Effect of duration of stimulus presentation on the angular acceleration threshold.
J. Exp. Psychol. 80(2):317-321, 1969.

Results should be compared to angular velocity of submersibles for purposes of design criteria and perhaps selection of crew members. (RK)
733. MCCOY, D. F., and K. C. LANGE.
Stimulus generalization of gravity.
J. Exp. Anal. Behav. 12:111-118, 1969. N.V.
734. MILES, S.
Underwater medicine (3rd ed.).
Philadelphia: J. B. Lippincott Co., 1969.

Discusses the effect of neutral buoyancy on perception, and other perceptual illusions occasioned in water. Mentions "interest in dizziness has in recent years subsided," but "cannot be lightly dismissed," and "is worthy of future consideration" (p. 94). A very good book. (RK)

735. MOSER, R., JR.
Spatial disorientation as a factor in accidents in an operational command.
Aerosp. Med. 40(2):174-176, 1969.
- A similar effort might be undertaken for divers.
736. PETERS, R. A.
Dynamics of the vestibular system and their relation to motion perception,
spatial disorientation, and illusions.
NASA Contractor Report No. CR-1309, Wash., D. C., April 1969.
737. PICK, H. L., JR., D. H. WARREN, and J. C. HAY.
Sensory conflict in judgments of spatial direction.
Perception & Psychophysics 6(4):203-205, 1969.
- The hierarchy of sensory modalities is shown in this study and as expected, vision is very important. However, the influence of proprioception over audition has application for underwater where the influence of the former is minimized. (RK)
738. RAINNIE, W. O., JR.
Adventures of Alvin.
Ocean Ind. 3:22-28, May 1969. Also published as Woods Hole Oceanogr. Inst.
Report 69-48, AD 692 346, May 1969. N.Y.
739. REASON, J. T., and A. GRAYBIEL.
Magnitude estimations of Coriolis sensations.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., and National Aeronautics
and Space Administration, NASA Order R-93, 18 July 1969.
- One of a series of studies on this phenomenon by these authors.
740. ROSS, H. E., S. D. CRICKMAR, N. V. SILLS, and E. P. OWEN.
Orientation to the vertical in free divers.
Aerosp. Med. 40(7):728-732, 1969.
- The authors report inverted (relative to gravity) performances are poorer than upright. Their findings are essentially supportive of the studies by Nelson (1968, #722), Brown (1961, #662), and others.
741. TROUT, O. F., JR., and W. J. BRUCHLEY, JR.
Water immersion reduced-gravity simulation.
Hum. Factors 11(5):473-488, 1969.
- A very good review. Although intended for an aerospace audience, it is directly applicable to diving. (RK)
742. YESSENOW, M. D.
A study of the relationship between nystagmus eye movements and the oculomotor illusion.
Submitted in partial fulfillment of the requirements for the degree of Doctor
of Philosophy, University of Rochester, New York, 1969.
- 1970-1972
743. ANON. (Staff - Deep Vehicles Branch of the U. S. Naval Oceanographic Office.)
Manned submersibles and underwater surveying.
U. S. Naval Oceanographic Office, Wash., D. C., 1970.
- Illustrates the characteristics of submersibles. In addition to possible problems from Coriolic stimulation due to head movements incidental to angular velocities (e.g., during turns), the presence or absence of ports may also lead to illusory disturbances connected to the vestibular apparatus. (RY)

744. BERNOTAT, R. K.
Rotation of visual reference systems and its influence on control quality.
IEEE Trans. on Man-Machine Systems, MMS-11 (2):129-131, 1970.
- There could be an application of the findings to instrument design in submersibles and perhaps for free swimming divers. (RK)
745. CLARK, B., and J. D. STEWART.
Thresholds for the perception of angular acceleration about the three major body axes.
Acta Otolaryngol. (Stockh) 69:231-236, 1970.
- See Clark and Stewart (1968b, #717).
746. COLLINS, W. E.
Effective approaches to disorientation familiarization for aviation personnel.
Department of Transportation, Federal Aviation Administration, Oklahoma City, Okla., Report No. AAI 70-17, November 1970. - -
- The training program reported here may be useful in connection with duty in submersibles. (RK)
747. EBENHOLTZ, S. M.
Perception of the vertical with body tilt in the median plane.
J. Exp. Psychol. 83(Part 1):1-6, 1970.
- Shows data regarding egocentric horizontality and variables which influence this ability.
748. FRANKLIN, S. S., H. E. ROSS, and G. WELTMAN.
Size-distance invariance in perceptual adaptation.
Psychon. Sci. 21(4):229-231, 1970.
- Adaptation to perceptual distortion is related to water and face mask distortion.
749. GRIGOR'EV IU, G., IU V. FARBER, and N. A. VOLOKHOVA.
Vestibuliarnye reaktsii. (Vestibular reactions. A71-28672.) 195 pp.
Moscow, Izdatel'stvo Meditsina, 1970.
- Of some interest regarding Coriolis forces and submersibles. (Abstract only seen.)
750. KENNEDY, R. S.
Visual distortion: a point of view.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 7600, Monograph #15, 6 January 1970.
- A review of the literature on visual distortion with references to vestibular distortions also. Speculations on mechanisms and counter-measures are made.
751. KOTASKOVA, J.
Some psychological aspects of isolation in hyperbaric conditions.
Revue De Physiologie Subaquatique 2(1), 1970.
- Mentions disorientation.
752. MCKAY, C. L.
Decrease in perceived distortion with repeated exposure: application for Naval diver training.
U. S. Naval Submarine Medical Center, Groton, Conn., Report No. 613, 16 February 1970.

753. MELVILL JONES, G.
Dynamic cross-coupling in the semicircular canals.
In D. E. Busby (Ed.) Recent advances in aerospace medicine, pp. 235-248.
Dordrecht-Holland: D.Reidel Publishing Co., 1970a.
- If vertigo occurs in future generations of submersibles this report will aid in explaining the mechanisms. (RK)
754. MELVILL JONES, G.
Origin significance and amelioration of Coriolis illusions from the semicircular canals: A non-mathematical appraisal.
Aerosp. Med. 41(5):483-490, 1970b.
- Countermeasures are suggested.
755. OOSTERVELD, W. J.
Threshold value for stimulation of the horizontal semicircular canals.
Aerosp. Med. 41(4):386-389, 1970.
- This experiment showed that laboratory threshold values are not very different from those obtained in flight. The threshold given is lower than the turn rate for some operational submersibles. (PK)
756. STOCKWELL, C. W., and F. E. GUEDRY, JR.
The effect of semicircular canal stimulation during tilting or the subsequent perception of the visual vertical.
Acta Otolaryngol. (Stockh) 70:170-175, 1970.
- This factor should be considered in underwater experiments investigating perception of the upright where subjects are often tumbled.
757. WADE, N. J.
Effect of prolonged tilt on visual orientation.
Q. J. Exp. Psychol. 22(3):423-439, 1970a.
- One of many studies by this author with a good review and explanation of the mechanisms.
758. WADE, N. J.
The effect of different psychophysical methods on visual orientation during tilt.
Psychon. Sci. 19(4):201-203, 1970b.
759. WATERLAND, J. C., and G. M. SHAYDES.
Biplane center of gravity procedures.
Percept. Mot. Skills 30:511-514, 1970.
760. WHITESIDE, T. C. D.
Blur zone.
Nature 225(5227):94-95, 1970.
- An interesting review and theoretical paper which raises a question about what is available for "seeing" when a subject is in motion. Although written for aviation, the slower speeds (but poorer visibility) of divers may make this a diving problem also. (RK)
761. BENSON, A. J., and F. E. GUEDRY, JR.
Comparison of tracking-task performance and nystagmus during sinusoidal oscillation in yaw and pitch.
U. S. Army Aeromedical Research Laboratory, Pensacola, Fla., Report No. 1123, 29 October 1970. Also Aerosp. Med. 42(6):593-601, 1971.
- Insofar as submersibles will occasion stimuli such as these, degraded performance might be expected. (RK)

762. CLARK, B.
Pilot reports of disorientation across 14 years of flight.
Aerosp. Med. 42(7):708-712, 1971.
- A reference list of review articles on this problem is in the paper, as is a reference to the construction of a questionnaire which could be modified to study similar problems in divers. (RK)
763. DZENDOLET, E.
Comments on Sjoberg's hypothesis for the mechanism of the inversion illusion under zero-gravity conditions.
Aerosp. Med. 42(11):1211-1213, 1971.
- The mechanism underlying the "inversion illusion under zero-gravity" may have direct relevance for the difficulties experienced by divers in judging the upright. Perhaps the otoliths only signal the plane of the gravity vector and not its direction. (RK)
764. GALLE, R. R., B. V. USTIUSHIN, L. N. GAVRILOVA, and E. I. KHELEVSKII.
K voprosu ob otsenke vestibularnoi ustochivosti. (The problem of estimating vestibular stability. A71-28414.)
Kosm. Biol. Med. 5:65-71, 1971.
- Different human tolerances to Coriolis stimuli (as might be encountered in a submersible) are discussed.
765. KELLOGG, R. S.
Vestibular influences on orientation on zero gravity, produced by parabolic flight.
In H. E. Adler (Ed.) Orientation: Sensory basis. Ann. N. Y. Acad. Sci. 188:217-223, 1971.
- There is application of his findings to underwater environments.
766. LEIBOWITZ, H.
Size constancy and visual space.
In H. E. Adler (Ed.) Orientation: Sensory basis. Ann. N. Y. Acad. Sci. 188, 1971.
767. MILLER, E. F., II, and A. GRAYBIEL.
Goggle device for measuring the visually perceived direction of space.
U. S. Naval Aerospace Medical Research Laboratory, Pensacola, Fla., Report No. 1151, November 1971.
- This device, modified for water and pressure, would be useful for investigating spatial orientation. (RK)
768. SEIREG, A., A. BAZ, and D. PATEL.
Supportive forces on the human body during underwater activities.
J. Biomech. 4:23-30, 1971.
769. STEWART, J. D.
Human perception of angular acceleration and implications in motion simulation.
J. Aircraft 8(4):248-253, 1971.
- Of application for design of underwater vehicles.
770. WEERTS, T. C., and W. R. THURLOW.
The effects of eye position and expectation on sound localization.
Perception & Psychophysics 9(1A):35-39, 1971.
- The influence of sound position versus eye and head position on localization are reported.

771. WELTMAN, G., J. E. SMITH, and G. H. EGSTROM.
Perceptual narrowing during simulated pressure-chamber exposure.
Hum. Factors 13(2):99-107, 1971.
- See also Weltman and Egstrom (1966, #705).
772. WOODS, J. D., and J. N. LYTHGOE (Eds.)
Underwater science.
New York: Oxford University Press, 1971. N.Y.
773. ADOLFSON, J., and T. BERGHAGE.
Man's sensory processes in the underwater environment.
New York: John Wiley & Sons, in press.
- The chapter on spatial orientation underwater discusses the influences of the vestibular system. A chapter on somesthesia contains reference to vestibular function underwater and pressure (body sway, vertically), as well as some examples of disorientation.
774. ADOLFSON, J. A., T. BERGHAGE, and L. GOLDBERG.
Effects of increased ambient air pressures on standing steadiness in man.
Aerospace Med., in press.
- Changes in balance as a function of ata occurred. Because noise affects balance (Tullio, 1929, #531; Bensel, et al., 1968, #584), the influence of chamber noise (Murry, 1970, #956; Summit and Reimers, 1971, #964) on equilibrium (Harris, et al., 1968, #718) should be ascertained also. (RK)
775. E. C. O. R., INC.
Underwater propulsion systems. Specification sheet, ECOR-1.
Melbourne, Fla., 1972.
- This announcement describing the ECOR-1 suggests that turning rates higher than 2 RPM can occur in submersibles and should be compared with threshold data for producing Coriolis vestibular illusion (Yeda, 1952, #92; Stewart and Clark, 1965, #692).
776. MORANT, R. B., and J. ARONOFF.
Starting position, adaptation and visual framework as influencing the perception of verticality.
J. Exp. Psychol., in press.
- Because of the relationship of this ability to certain personality variables (e.g., field independence) there may also be application for diver selection. (RK)
777. SCHROEDER, D. J.
Some effects of alcohol on nystagmus and vertigo during caloric and optokinetic stimulation.
Ann. Otol. Rhinol. Laryngol. 81(2):218-230, 1972.
- Divers as a group tend to drink heavily and because alcohol can influence vestibular reaction (at times inhibiting and at times facilitating), this should be considered.

778. SHENTON, E. H.
The story of the deep submersible.
New York: Norton, 1972.
779. VAUGHAN, W. S., JR., and A. S. MAVOR.
Diver performance in controlling a wet submersible during four-hour exposure
to cold water.
Hum. Factors 14(2):173-180, 1972.

CATEGORY V. THE USE OF THE VESTIBULAR SYSTEM AS AN INERTIAL GUIDANCE SYSTEM.

1850-1900

780. GALTON, F.

The art of travel; or, Shifts and contrivances available in wild countries.
London: John Murray, Albemarle Street, 1856.

Early reference to methods of navigation in humans and animals, e.g., moss on trees (p. 126), etc.

781. GULDNER, F. O.

Die Cirkularbewegung als thierische Grundbewegung, ihre Ursache, Phänomenalität und Bedeutung. (The circular movement as the basic movement of animals, its cause, phenomenon and importance. Trans. by Mrs. A. Woke, NMTI, 1972.)
Z. Biol. (Munich) 35:419-458, 1897.

Shows that organisms travel in a circle and suggests the functional importance of such a tendency is to permit them (in the case of certain animals) to rejoin the herd. Mentions (p. 438) that deep sea divers see fishes swimming in circles in response to illumination by diver's lanterns.

1900-1902

782. GRAY, A. A.

The labyrinth of animals. Vol. II.
London: J. & A. Churchill, 1908.

See Gray (1907, Vol. I, #203).

1910-1919

783. TROMBRIDGE, C. C.

Fundamental methods of orientation & "imaginary maps."
Science 38:888-897, 1913.

Discusses the different methods employed in navigation in humans. Some methods are better (e.g., imaginary maps) for some functions and poorer for others. Application for free swimming and reconnaissance divers may be found. (PK)

784. ABBERWALDEN, E.

Beobachtungen zur Frage der morphologischen und funktionellen Asymmetrie des menschlichen Körpers. (Observations concerning the question of the morphological and functional asymmetry of the human body. Trans. by Mrs. A. Woke, NMTI, 1971.)

Pflugers archiv für die gesamte physiologie 177:213-216, 1910.

An early study showing directional preponderances and preferences in humans. In particular the tendency within individuals to ascend different stairways is used to launch a discussion of the basis of this response preference.

1920-1929

785. BULLINGTON, W. E.

A study of spiral movement in the Ciliate Infusoria.
Arch. Protistenk. 50(5):219-274, 1925.

The author reports most of the one-celled organisms studied (164 ciliates) tend to spiral movement in a leftward (counterclockwise) direction. The ratio is about 2:1. This study was performed in the Northern Hemisphere (largely at Cold Spring Harbor). The author does not mention that the rotation of the earth could be a factor, but if ciliates in the Southern Hemisphere turn mostly rightward this would suggest that organisms are capable of responding to very low levels of Coriolis force. Future study appears warranted and if positive findings are obtained, there may be practical application for navigation in humans. (PK)

786. WEBER, C. O.
The properties of space and time in kinesthetic fields of force.
Am. J. Psychol. 38:597-606, 1927.
787. RABAUD, E.
How animals find their way about.
New York: Harcourt, Brace and Co., 1928.
788. SCHAEFFER, A. A.
Spiral movement in man.
J. Morph. Physiol. 45:293-398, 1928.
- In this long and significant article the author reviews the functional significance of directional preponderance (turning) in man and animals. In addition to discussing spiral movements across phylla (amoeba to man), the author also discusses experiments on blindfolded persons walking and swimming. An excellent bibliography is presented; many articles are in German. Experiments in man on turning during swimming and rowing are reported, mechanisms are discussed. (PK)
789. KNOTTS, J. R., and W. R. MILES.
The maze-learning ability of blind compared with sighted children.
J. Genet. Psychol. 36(1):21-50, 1929.
- Better performance was obtained by blind than blindfolded persons, and recently blind persons appeared to learn better than blind prior to age five.

1930-1939

790. LUND, F. H.
Physical asymmetries and disorientation.
Am. J. Psychol. 42:51-62, 1930.
- An important paper applicable to diver navigation and orientation. For example, one interesting finding: right turning predominates in walking, but left turning in swimming is due most likely to the fact that left legs are longer and right arms are stronger (p. 59), although the relationship is not perfect (also see Schaeffer, 1928, #788; and others).
791. DESILVA, H. R.
A case of a boy possessing an automatic directional orientation.
Science 73:393-394, 1931.
- Although the ability was not as good as claimed, it shows how one's "sense of direction" can profit by use of the ability.
792. DUNCAN, B. K.
A comparative study of finger-maze learning by blind and sighted subjects.
J. Genet. Psychol. 44(1):69-95, 1934.

1940-1949

793. GREGG, F. M.
Overcoming geographical disorientation.
J. Consult. Psychol. 4:66-68, 1940.
- Shows the influence of the vestibular system when "intently thinking (p. 66)" of a "geographic direction (p. 66)."
794. RYAN, T. A., and M. S. RYAN.
Geographical orientation.
Am. J. Psychol. 53:204-215, 1940.
- A study on humans.

795. LORD, F. E.
A study of spatial orientation of children.
J. Educ. Res. 34(7):481-505, 1941.

A good paper for future studies of navigation in free swimming divers. (PK)
Several additional references.

796. GRIFFIN, D. R.
The sensory basis of bird navigation.
Q. Rev. Biol. 19:15-31, 1944.

Evaluates kinesthetic and other theories of homing. Excellent bibliography.

1950-1959

797. MENZIO, P.
Labyrinthine reactions induced in man by means of minimal thermal stimuli and
the influence of previous modification of temperature in the external auditory
canal.
Arch. Fisiol. 51:154, 1951. N.Y.

798. WORCHEL, P.
Space perception and orientation in the blind.
Psychol. Monogr. 65(15):1-28, 1951.

Among other findings the author suggests that time estimation is the method
employed in navigation.

799. CLARK, B., and R. D. MALONE.
Topographical orientation in naval aviation cadets.
U. S. Naval Air Station, Pensacola, Fla., Report No. 001 039.01.30, 2 June 1952.

A test is reported which purports to measure a personality or life style trait
"sense of direction." The hypothesis was that high scores could be related to
success in aviation training. No relationship was found. However the trait, if
it exists, may be more critical for divers than pilots since the latter have more
navigation aids and therefore can depend less on their sense of direction. (PK)

800. WORCHEL, P.
The role of the vestibular organs in space orientation.
J. Exp. Psychol. 44(1):4-10, 1952.

801. DALLENBACH, K. M.
The phenomenal vertical and horizontal in blind and sighted subjects.
Am. J. Psychol. 66:598-602, 1953.

802. McREYNOLDS, J., and P. WORCHEL.
Geographical orientation in the blind.
J. Gen. Psychol. 51:221-236, 1955.

Because divers are often rendered effectively blind by the poor visibility of
some water, there is much to be learned regarding navigation from this literature.
(PK) This study and others by Worcheil have good bibliographies.

803. ROUSE, D. L. and P. WORCHEL.
Veering tendency in the blind.
New Outlook for the Blind 49(4):115-118, 1955.

There is a directional tendency to veer even in blind persons and this tendency is
relatively consistent within a subject. Perhaps a "personal equation" identified in
a diver could improve the diver's ability to navigate. (PK)

804. BERG, J., and P. WORCHEL.
Sensory contributions to human maze learning: a comparison of matched blind, deaf, and normals.
J. Gen. Psychol. 54:81-93, 1956.
- There is application for underwater swimmer navigation, as well as for the training of blind divers. (RK)
805. GIEDRY, F. E., and G. RICHMOND.
Differences in response latency with different magnitude angular acceleration.
U. S. Army Medical Research Laboratory, Pensacola, Fla., Report No. 301, 2 November 1957.
- Shows response of subject to various magnitudes of turning (angular acceleration) stimuli.
806. MARGARIA, R.
Prolonged after-effect of centripetal and tangential accelerations on cerebellar potentials.
Final Report, Contract AF 61(514)-968, AF Air Research & Development Command, AD 152 246, Summary of work from 1 June 1956 to 30 September 1957.
- "Potatory and post-rotatory cerebellar activity in birds [is] investigated (p. 1)" and reported. Responses are obtained in cerebellar cortex as low as .01-.02 g.
807. GRIFFIN, D. R.
Listening in the dark: The acoustic orientation of bats and men.
New Haven: Yale University Press, 1958.
- See Chapter 12, "Echolocation in the Blind."
808. GIEDRY, F. E., and S. J. CEPAY.
Derivation of 'subjective velocity' from angular displacement estimates made during prolonged angular accelerations: adaptation effects.
U. S. Army Medical Research Laboratory, Fort Knox, Ky., Report No. 376, 23 November 1958.
- The accuracy of subjective stimuli of turning is given.

1960-1969

809. FRAENKEL, G., and D. L. GUNN.
The orientation of animals.
New York: Dover Books, 1960.
810. DIFFENBACH, W. S.
The ability of submerged subjects to sense the gravitational vertical.
Cornell Aeronautical Laboratory, Inc., Buffalo, N.Y., Report No. M-1355 V-1, 2 September 1961.
- Shows how poor is orientation to the vertical when subjects are immersed in water and tilted.
811. FRAENKEL, G. S., and D. L. GUNN.
The orientation of animals: Kineses, taxes, and compass reactions.
New York: Dover Publications, Inc., 1961.
- Probably the best single reference work for a basic understanding of the problem and for implication to human navigation. Excellent references.

812. BERITOFF, J. S.
 Spatial orientation of man and animals.
 XXII Inter. Congr. Physiol. Sci., Leiden, 1-17 September 1962.
Inter. Congr. Series 1(47):3-4, 1962.
- Shows (in a film) the importance of a functioning labyrinth (human and dog) for traversing a route.
813. HOWLAND, C. H., and B. HOWLAND.
 The reaction of blinded goldfish to rotation in a centrifuge.
J. Exp. Biol. 39:491-502, 1962.
814. MEWALDT, L. R.
 Displacement of migratory birds.
 San Jose State College, Calif., NONR Report No. (N)-00030-62, 26 December 1962.
815. PPATT, J. G.
 Research on animal orientation, with emphasis upon the phenomenon of homing in pigeons.
 Duke University, Raleigh, N. C., ONR Research Project No. 301-244, 18 October 1962.
816. ADLER, H. E.
 Sensory factors in migration.
Anim. Behav. 11(4):566-577, 1963.
- A review of the sensory system involved in animal migration. An excellent bibliography. His reports of time estimation (i.e., internal clocks) are useful in theoretical formulations regarding the use of the vestibular system as an initial guidance system. (NK)
817. AUTUMI, H., et al. (Eds.)
Orientierung der Tiere Animal Orientation.
 Berlin, Gottingen, Heidelberg: Springer-Verlag, 1963.
- All papers in this symposium have English summaries although some articles are in German. There are several very good papers.
818. BERITACHIVILI, I. S. (BERITOV)
 Les mecanismes nerveux de l'orientation spatiale chez l'homme.
Neuropsychologia 1:233-249, 1963.
- The English summary describes how deaf-mutes with bilateral labyrinthine defects were unable "to walk along the route along which they were led or carried (p. 248)." However, otherwise normal deaf-mutes could (i.e., not labyrinthine defective). Same author as Beritoff (1962, #812).
819. BARLOW, J. S.
 Inertial navigation as a basis for animal navigation.
J. Theor. Biol. 6:76-117, 1964.
- Offers a theory and model regarding the use of the vestibular system in animal migration and navigation.
820. MARGARIA, R., and G. A. CAVAGNA.
 Human locomotion in subgravity.
Aerospace Med. 35:1140-1146, 1964.
- See other papers by Margaria.
821. SCHMIDT-KOENIG, K.
 Sun compass orientation of pigeons upon displacement north of the Arctic Circle.
Biol. Bull. 127(1):154-158, 1964.

822. BARLOW, J. S.
Inertial navigation and animal navigation.
N. Engl. J. Med. 273(20):1090-1092, 1965.
Similar to Barlow (1964, #819).
823. BATSCHELET, E.
Statistical methods for the analysis of problems in animal orientation and certain biological rhythms.
Wash., D. C.: The American Institute of Biological Sciences, 1965.
Some of these methods can be applied to studies of navigation in free swimming divers.
824. CRATTY, B. J.
Perceptual alterations of veer by interpolated movement experience.
Res. Q. Am. Assoc. Health Phys. Educ. 35:22-28, 1965.
This report is short but has many applications for diving medium. It suggests important leads for research, particularly for aiding navigation in free swimming reconnaissance divers. (PK)
825. SHOOP, C. R.
Orientation of ambyctoma maculatum: Movements to and from breeding ponds.
Science 149(3683):558-559, 1965.
826. BARLOW, J. S.
Inertial navigation in relation to animal navigation.
J. Inst. Navigation 19(3):302-316, 1966.
Similar to Barlow (1964, #819).
827. BROWN, J. H.
Magnitude estimation of angular velocity during passive rotation.
J. Exp. Psychol. 72(2):169-172, 1966.
Brown's article shows that the subjects' reports of a vestibular stimulus (i.e., turning) is proportional to the stimulus, and the error of the estimate is small. This report and others in this section suggest that the ability to navigate by "direction sense" is better than the use made of it in practical situations. (PK)
828. E'TLEN, J. T., and R. L. PEGGIE.
The navigation of penguins.
Sci. Am. 215(4):105-113, 1966.
Although a sun compass is used when available during long dark winter nights another mechanism may be involved at other times. (PK)
829. STORM, R. M. (Ed.)
Animal orientation and navigation.
Corvallis: Oregon State University Press, 1966.
Some very excellent papers appear in this book and the bibliographies are good. Inertial theories are discussed occasionally (cf. pp. 35-37; especially p. 54).
830. CARP, A. F.
So excellent a fish. (A natural history of sea turtles.)
Garden City, N.Y.: The Natural History Press, 1967.
Describes the various theories of navigation/migration in green turtles. Speculates on how the animals find Ascension Island--a "small crumb out in the sea between Africa and South America (p. 150)" and near the equator. One of the theories offered uses the vestibular system.

831. GENTRY, R. L.
Underwater auditory localization in the California sea lion.
J. Auditory Res. 7:187-193, 1967.
832. LOCKLEY, R. M.
Animal navigation.
New York: Hart Publishing Co., 1967.
The chapters on "A sense of balance (p. 66)" and "A sense of time (p. 72)" are most important for a study of human navigation. (RK)
833. TOLSTOY, L.
Master and man.
In Great Short Works of Leo Tolstoy, pp. 453-500. New York: Harper & Row, 1967.
Circular movement in humans was well enough known to Tolstoy that it served as the theme of this story.
834. ANDERSEN, B. C.
Diver performance measurement: Underwater navigation, depth maintenance, weight carrying capabilities.
General Dynamics Electric Boat Division, Groton, Conn. Human Factors Section Report No. U-417-68-030, AD 674 528, March 1968.
Navigation accuracy averaged 5.21° over a 780-foot course. If bias was constant within a diver perhaps a knowledge of a "personal equation" could improve accuracy. Further, if cause of error could be attributed to relative strength of the legs, perhaps a diver could be trained to modify his headings. (TK)
835. GRAYBIEL, A., E. F. MILLER, B. D. NEWSOME, and R. S. KENNEDY.
The effect of water immersion on perception of the oculoravvic illusion in normal and labyrinthine-defective subjects.
Acta Otolaryngol. (Stockh) 65:599-610, 1968.
Shows that orientation to the upright in water is better in normal than in persons with labyrinthine defects.
836. HIXSON, W. C., and J. I. NIVEN.
Instrumentation for measurement of vestibular-significant forces in helicopters.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., Report No. 1043, USAAMRMC Serial No. 68-10, 21 May 1968.
This system might be adapted for underwater use and could then serve as a navigation aid.
837. JANDER, R.
Über die Ethometric von Schlüsselreizen, die Theorie der telotaktischen Wahlhandlung und das Potenzprinzip der terminalen Cumulation bei Arthropoden. (On the ethometry of sign stimuli, the theory of telotactic choice, and the power principle of the terminal cumulation in Arthropoda.)
Z. Vergl. Physiol. 59:319-356, 1968.
838. KAVANAU, J. L., and C. E. WISCHER.
Program clocks in small mammals.
Science 161:1256-1259, 1968.
For the vestibular system to be able to serve as a useful inertial guidance system it must respond to the linear and angular forces and must also have an accurate timing device. This paper shows how accurate some clocks in animals can be. (TK)
839. McDONALD, D. L.
Bird orientation: A method of study.
Science 161:486-487, 1968.

840. ANDERSEN, B. G., F. L. ALLEN, and J. C. LAW.
Diver performance measurement: transporting neutrally buoyant objects, manual movement by heavy objects.
General Dynamics Electric Boat Division, Groton, Conn. Prepared for the Office of Naval Research, Wash., D. C., Report No. U-417-69-066, July 1969.

Effects of weight-carrying on navigation is reported.
841. BERTMAR, G., and R. TOFT.
Sensory mechanisms of homing in salmonid fish. I. Introductory experiments on the olfactory sense in grilse of Baltic salmon (*Salmo Salar*).
Behaviour 35(3-4):235-241, 1969.
842. CLARK, D., and J. D. STEWART.
Effects of angular acceleration on man: Thresholds for the perception of rotation and the oculogyral illusion.
Presented at the Annual Meetings of the Aerospace Medical Society, San Francisco, Calif., May 5-8, 1969.

See Clark and Stewart (1963b, #717).
843. PROSCHER, V. B.
The magic of the senses.
New York: E. P. Dutton & Co., Inc., 1969.

Chapters 8 and 9 on Migration and Navigation, respectively, are of interest.
844. GUEDRY, F. E., JR., G. C. OWENS, and J. W. NORRMAN.
Assessment of semicircular canal function: I. Measurements of subjective effects produced by triangular waveforms of angular velocity.
U. S. Naval Aerospace Medical Institute, Pensacola, Fla., NAVF-1073, USAARL 69-7, AD 695368, June 1969.

A useful method for studying the analogue of the vestibular apparatus as an inertial guidance system.
845. HOLUBAR, J.
The sense of time: An electrophysiological study of its mechanisms in man. 1961.
Trans. from the Czech by John S. Barlow. Cambridge, Mass.: Mass. Institute of Technology, 1969.

This recently translated work reports on the accuracy of timing behavior in man and animals. A supplemental bibliography is appended. An important source for studies of navigation by vestibular cues. (RK)
846. MAYNE, R.
The analogy of the vestibular organs to an inertial guidance system.
Oto-Rhino-Laryngology Excerpta Medica International Congress Series No. 206:407-415, 1969a.

This excellent paper makes the point that this analogy has not been discussed much in vestibular physiology. It follows and should be added that the application of these findings to problems of diver navigation could have important implications and applications. (RK)
847. MAYNE, R.
The analogy of the vestibular organs to an inertial guidance system.
Presented at the World Congress of Oto-Rhino-Laryngology, Mexico City, August 1969b.

Essentially the same as Mayne (1969a, #846), however an updated version of both will appear in Handbook of sensory physiology. VI. Vestibular system. Berlin: Springer-Verlag, in press.

848. OWENS, G. G. and F. E. GUEDRY, JR.
Assessment of semicircular canal functions: II. Individual differences in subjective angular displacement produced by triangular waveforms of angular displacement.
U. S. Army Aeromedical Research Laboratory, Pensacola, Fla., Report No. 1074, 17 June 1969.

Adaptation of this method using trains of stimuli could be worthwhile in studying information processing with vestibular stimulation relative to navigation by "dead reckoning" or "direction sense." Individual differences could be useful for purposes of selection. (RK)

849. PARTRIDGE, L. D., and J. H. KI'.
- Dynamic characteristics of response in a vestibulomotor reflex.
J. Neurophysiol. 32(4):485-495, 1969.

889. WARD, R. R.
The living clocks.
New York: Alfred A. Knopf, 1971.
- An accurate inertial guidance system is only as accurate as the timer. (RK) This discusses various timers in organisms.
890. ANON.
(A question and answer regarding vestibular system in flounders.)
Sea Secrets, 16(1), 1972.
- The response to a question regarding the directional specificity of the migration of the eye and optic nerve in flounders is of interest (p. 14).
891. BLAKESLEE, E.
Sensitivity of pigeons to direction of movement considered in relation to inertial guidance theories of animal navigation.
Unpublished Ph.D. dissertation, University of Indiana, Bloomington, 1972.
892. EMLEN, S. T.
Birds. Their migration is at least as complex as human navigation and probably no more mysterious.
Psychol. Today 5(11):52-56, f. 94, 1972.
- Mentions the importance of celestial cues in navigation but agrees that other cues (e.g., vestibular) could be important.
893. GALLER, S. R., K. SCHMIDT-KOENIG, C. J. JACOBS, and R. E. BELLEVILLE.
Animal orientation and navigation.
National Aeronautics and Space Administration, Wash., D. C. 1972.
- In this long report (600 pp.) studies of virtually all forms of navigation and orientation of homing and migratory animals are discussed. No reports deal specifically with man.
894. WILTSCHKO, W., and R. WILTSCHKO.
Magnetic compass of European robins.
Science 176:62-64, 1972.
- The magnetic compass of European robins does not use the polarity of the magnetic field for detecting the north direction. The birds derive their north direction from interpreting the inclination of the axial direction of the magnetic field lines in space, and they take the direction on the magnetic north-south axis for "north" where field lines and gravity vector form the smaller angle. (Author's abstract.)
